# **PREFACE**

"The Nation" is a data series designed to illustrate the scope and depth of the information collected by the 1986 Census. This is achieved by displaying considerable detail on selected variables (for example, occupation) or alternatively by crosstabulating variables to illustrate the analytical potential of the data (for example, age by sex and marital status). In addition, some tables include comparison to 1981 data and a few basic tables show data from earlier censuses.

The series consists of nineteen (19) publications. The first four (4) publications released contain basic information collected from all households on demographic, family, household and dwelling characteristics. The remainder of the publications contain data collected from a 20% sample of households. Included is information covering social, cultural, labour and income characteristics. Additional information is also available on languages, families, households and dwellings.

The series provides national coverage. Most tables include provincial and territorial data but no subprovincial data are presented.

In addition to "The Nation", there are two other data series. The "Profiles" series provides a statistical overview of a particular subprovincial area (e.g., municipality) touching on a wide selection of census variables but providing a limited amount of detail. The series "Dimensions" provides data on selected topics for which there has been considerable interest expressed such as the immigrant population, ethnic groups, etc.

# **PRÉFACE**

"Le Pays" est une série de données destinées à illustrer l'étendue et l'ampleur des renseignements recueillis lors du recensement de 1986. Pour ce faire, certaines variables affichent un niveau de détail considérable (profession, par exemple) ou encore des croisements de variables permettent d'illustrer les possibilités analytiques des données (âge selon le sexe et l'état matrimonial, par exemple). De plus, certains tableaux présentent des comparaisons aux données de 1981 et quelques autres tableaux de base renferment des données des recensements antérieurs.

La série comprend dix-neuf (19) publications. Les quatre (4) premières publications contiennent des renseignements de base recueillis auprès de l'ensemble des ménages sur les caractéristiques démographiques et celles des familles, des ménages et des logements. Les autres publications contiennent des données recueillies auprès d'un échantillon de 20% des ménages. Ces données contiennent des renseignements sur les caractéristiques sociales, culturelles, de la maind'oeuvre et du revenu. Il y a également des renseignements supplémentaires sur les langues, les familles, les ménages et les logements.

La série recouvre l'ensemble du pays. La plupart des tableaux comprennent des données provinciales et territoriales mais ne contiennent aucune donnée infraprovinciale.

En plus de la série "Le Pays", on prévoit publier deux autres séries. Une série de "Profils" donne un aperçu statistique d'une région géographique donnée (par exemple, une municipalité) en utilisant une vaste gamme de variables du recensement, mais avec un niveau de détail limité. Une série "Dimensions" fournit des renseignements sur certains sujets qui ont suscité un intérêt considérable, tels que les immigrants, les groupes ethniques, etc.

# **HIGHLIGHTS**

- According to the 1986 Census, 43.7% of Canadians lived in a different dwelling than they had five years earlier. This is the lowest proportion in any census since 1961. Over the last 25 years, Canadians were most mobile during 1971 to 1976 when almost half (48.5%) of the population changed residence (Table 1).
- Nine out of 10 movers who changed dwellings between 1981 and 1986 moved within the same province. The other 1 in 10 either moved between provinces or entered Canada during the five years between 1981 and 1986. Over half of the total movers had moved within the same municipality (Table 1).
- As in previous censuses, the mobility of regional populations tended to rise from east to west. People living in Newfoundland moved the least, with only 3 in 10 residents having changed dwellings between 1981 and 1986. Alberta and British Columbia had the most mobile provincial populations with 5 in 10 reporting a different residence. The most mobile populations, however, were in the North. Six in 10 residents in the Yukon and Northwest Territories lived in different dwellings over the five-year period (Table 1).
- Persons aged 25 to 29 were the most mobile, with 3 out of 4 Canadians in this group reporting that they lived in a different dwelling five years earlier. From this peak, mobility declined steadily with age, in a pattern common to previous censuses. For those aged 65 or over, only 1 in 5 reported living in a different dwelling in 1986 (Table 2).
- In the younger age groups, females were more likely to move than males. This tendency to greater mobility among young females than males was most pronounced in the 20-24 age group (Table 2).
- In 1986, just under a million people or 4% of the population lived in a different province or territory than they had five years earlier (Table 3).

# **FAITS SAILLANTS**

- Le recensement de 1986 révèle que 43.7% des Canadiens demeuraient dans un logement différent de celui qu'ils occupaient cinq ans plus tôt. Ce pourcentage est le plus bas depuis le recensement de 1961. Au cours des 25 dernières années, la mobilité des Canadiens a été la plus accrue au cours de la période 1971-1976 alors que presque la moitié d'entre eux (48.5%) a déménagé (tableau 1).
- Sur 10 personnes ayant déménagé entre 1981 et 1986, 9 ont déménagé dans la même province et une a soit changé de province ou est entrée au Canada au cours de la période 1981-1986. Plus de la moitié du nombre total de personnes qui ont déménagé sont restées dans la même municipalité (tableau 1).
- Comme dans les recensements précédents, la mobilité des populations régionales semblait vouloir augmenter de l'est à l'ouest. La population de Terre-Neuve est celle qui a le moins déménagé, 3 résidents sur 10 seulement ayant déménagé entre 1981 et 1986. Les populations des provinces de l'Alberta et de la Colombie-Britannique ont été les plus mobiles, 5 personnes sur 10 ayant déclaré un résidence différente. C'est dans le nord cependant que l'on a relevé le plus de mobilité, 6 résidents sur 10 du Yukon et des Territoires du Nord-Ouest ayant déménagé au cours de la période 1981-1986 (tableau 1).
- Les personnes de 25 à 29 ans étaient les plus mobiles, 3 sur 4 ayant déclaré qu'elles demeuraient dans un logement différent de celui qu'elles occupaient cinq ans plus tôt. Par la suite, le taux de mobilité a décliné continuellement avec l'âge des personnes, suivant la même tendance des recensements précédents. Chez les personnes de 65 ans et plus, 1 personne sur 5 seulement a déclaré demeurer dans un logement différent en 1986 (tableau 2).
- Chez les plus jeunes, les femmes étaient plus susceptibles de déménager que les hommes.
   Cette tendance s'est fait le plus sentir chez les personnes de 20 à 24 ans (tableau 2).
- En 1986, un peu moins d'un million de personnes (ou 4% de la population) vivaient dans une province ou un territoire différent de celui qu'elles occupaient cinq ans plus tôt (tableau 3).

- During 1981-1986, a reversal in the earlier westward flow of interprovincial migration occurred with a decline in the oil industry. Ontario replaced Alberta as the principal beneficiary of interprovincial movements of population, with a net gain of almost 100,000 people. Ontario's net gain from Alberta alone was 25,000 persons: some 70,000 Albertans had moved to Ontario, while only 45,000 Ontario residents had relocated to Alberta (Tables 3 and 10).
- For the first time in two decades, flows of population to and from Alberta resulted in a net loss for this province of almost 30,000 people (Table 3).
- Quebec's net outflow of population through interprovincial migration (63,000), the largest among the provinces, was less than half of its previous loss (142,000) in 1976-1981 (Table 3).
- Interprovincial migrants tend to have more education than Canadians in general. In 1986, close to 60% of these migrants had some postsecondary education (including trade certificates or diplomas) compared to only 43% of all Canadians (aged 15 years and over). This comparison holds true across the major age groups (Table 5A).
- Compared to the total Canadian population (ages 15+), a higher percentage of interprovincial migrants were in the labour force in 1986 (77% vs 66%) (Table 7A).
- The occupational distribution of interprovincial migrants differs from the overall labour force. A higher percentage of interprovincial migrants were in service occupations (17.5% vs 12.4%) while lower percentages were in farming (1.7% vs 3.9%) and in occupations related to processing, machining, products fabricating and assembly (7.9% vs 12.9%). A higher concentration of the migrant labour force was employed in the natural and social sciences, and in managerial and administrative occupations, 19.9% compared to 15.6% of the labour force in general (Table 8A).

- Au cours de la période 1981-1986, avec le déclin de l'industrie du pétrole, on a constaté un renversement de la tendance migratoire provinciale vers l'ouest. L'Alberta a cédé la place à l'Ontario comme province accueillant le plus grand nombre dе migrants interprovinciaux, pour un gain net de près de 100,000 personnes. De ce nombre, 25,000 venaient de la province de l'Alberta seule: quelque 70,000 Albertains avaient déménagé en Ontario, tandis que 45,000 résidents de l'Ontario seulement étaient retournés en Alberta (tableaux 3 et 10).
- Pour la première fois depuis deux décennies, les mouvements de population à destination et en provenance de l'Alberta ont entraîné une perte nette de près de 30,000 personnes pour cette province (tableau 3).
- Au Québec, l'émigration interne nette vers d'autres provinces (63,000), le plus élevé de toutes les provinces, représentait moins de la moitié de la perte (142,000) qu'a accusée le Québec au cours de la période 1976-1981 (tableau 3).
- Les migrants interprovinciaux tendent à avoir un plus haut niveau de scolarité que les Canadiens en général. En 1986, près de 60% de ces migrants avaient fait une forme quelconque d'études postsecondaires (y compris un certificat ou un diplôme d'une école de métiers), comparativement à 43% seulement de tous les Canadiens (15 ans et plus). Cette tendance se maintient pour tous les principaux groupes d'âge (tableau 5A).
- Comparativement à l'ensemble de la population canadienne (15 ans et plus), les migrants interprovinciaux étaient plus nombreux au sein de la population active en 1986 (77% contre 66%) (tableau 7A).
- La répartition des professions des migrants interprovinciaux diffère de celle de la population active en général. Les migrants interprovinciaux étaient plus nombreux dans le secteur des services (17.5% contre 12.4%), mais moins nombreux dans le secteur de l'agriculture (1.7% contre 3.9%) et les autres professions liées à la transformation, à l'usinage, à la fabrication de produits et à l'assemblage (7.9% contre 12.9%). Un pourcentage plus élevé de la population active migrante travaillait dans le domaine des sciences naturelles et des sciences sociales, de la gestion et de l'administration (19.9% par rapport à 15.6% de la population active en général) (tableau 8A).

93-108 93-108

The distribution of interprovincial migrants by industry group differs from that of the overall labour force. Higher proportions of migrants were in service industries. Almost 14% of migrants were in government services (such as the Armed Forces) compared to only 7% of the overall labour force. Higher percentages were also employed in the accommodation, food and beverage, business and other service industries combined, 21% vs 17% (with the exception of education, health and social services). In contrast, lower percentages of interprovincial migrants were observed in manufacturing, only 11%, as compared to almost 17% of the general labour force, and in agriculture, 1.6% compared to 4% overall (Table 9A).

La répartition des migrants interprovinciaux selon les groupes d'industries diffère de celle de la population active en général. Un pourcentage plus élevé de migrants travaillaient dans le secteur des services. Presque 14% des migrants étaient employés par les services publics (comme les Forces armées), comparativement à 7% seulement de la population active en général. Les migrants étaient également plus nombreux (21% contre 17%) dans les secteurs du logement, de l'alimentation et des boissons, des affaires et des autres services combinés (à l'exception de l'enseignement, des services sociaux et des services de santé). Par contre, on comptait moins de migrants interprovinciaux dans les secteurs de la fabrication (11% seulement contre presque 17% de la population active en général) et de l'agriculture (1.6% contre 4% de l'ensemble de la population active) (tableau 9A).

# GUIDELINES FOR USING THIS PUBLICATION

# **PURPOSE**

This publication provides a variety of census data describing selected characteristics of interprovincial migrants in terms of the components of interprovincial migration: inmigration (in-migrants from another province or territory), out-migration (out-migrants to another province or territory) and net migration (inmigration less out-migration). It also includes current and historical data on mobility status.

Users of these data should be aware that the characteristics of interprovincial migrants are as of Census Day, June 3, 1986 and not at the time of migration.

# ORGANIZATION OF THE PUBLICATION

This publication consists of 11 tables. All data in this publication are cross-classified by sex. The figure on page xxxi provides the 1981 and 1986 Census mobility status for Canada.

# TABLE DESCRIPTIONS

Below is a brief description of the tables presented in this publication. Definitions of the terms and concepts used are provided in the "Definitions" section at the end of the publication.

Table 1 shows the percentage distribution of the population 5 years and over by mobility status for the years 1961, 1971, 1976, 1981 and 1986. The classification of mobility status is described in the "Definitions" section of this publication.

**Table 2** presents the number of persons by mobility status and age groups for 1986.

Table 3 provides the number of interprovincial migrants by the components of interprovincial migration (in-, out- and net migration) for the years 1961, 1971, 1976, 1981 and 1986. The Yukon and Northwest Territories are combined for 1961.

# LIGNES DIRECTRICES POUR L'UTILISATION DE CETTE PUBLICATION

93-108

# BUT

La présente publication fournit une gamme de données du recensement sur certaines caractéristiques des migrants interprovinciaux selon les composantes de la migration interprovinciale: immigration interne (immigrants internes d'une autre province ou territoire), émigration interne (émigrants internes vers une autre province ou territoire) et migration nette (immigration interne moins émigration interne). Elle comprend également les données courantes et historiques sur la mobilité.

Les utilisateurs de ces données devront reconnaître que les caractéristiques des migrants interprovinciaux sont celles qui ont été observées le 3 juin 1986, jour du recensement, et non celles au moment de la migration.

# ORGANISATION DE LA PUBLICATION

La présente publication renferme 11 tableaux. Toutes les données comprises dans la publication sont recoupées selon le sexe. La figure à la page xuix montre la mobilité aux recensements de 1981 et de 1986 pour le Canada.

### DESCRIPTION DES TABLEAUX

Vous trouverez ci-dessous une brève description des tableaux contenus dans la présente publication. Les définitions des termes et des concepts utilisés sont offertes dans la section "Définitions" à la fin de l'ouvrage.

Le **tableau 1** montre la répartition en pourcentage de la population de 5 ans et plus selon la mobilité, pour les années 1961, 1971, 1976, 1981 et 1986. La classification de la mobilité est décrite à la section "Définitions" de la présente publication.

Le **tableau 2** donne le nombre de personnes selon la mobilité et le groupe d'âge pour 1986.

Le tableau 3 donne le nombre de migrants interprovinciaux selon les composantes de la migration interprovinciale (immigration interne, émigration interne et migration nette) pour les années 1961, 1971, 1976, 1981 et 1986. Les données pour le Yukon et les Territoires du Nord-Ouest sont combinées pour 1961.

Tables 4 to 9 show selected characteristics of interprovincial migrants by age groups for 1986. The "A" part of each table provides the Canada summary, while the "B" part presents the components of interprovincial migration for the provinces and territories. The characteristic of each table is given below:

Tables 4A and 4B – Marital status
Tables 5A and 5B – Highest level of schooling
Tables 6A and 6B – Major field of study
Tables 7A and 7B – Labour force activity
Tables 8A and 8B – Occupation major groups
Tables 9A and 9B – Industry divisions

Table 10 shows the 1981-1986 origin-destination matrix (provinces and territories) for internal migrants by age groups. The intersecting row/column cells for the same province or territory contain the number of intraprovincial migrants.

Table 11 provides internal migrants by migration status, age groups and lifetime migration for 1986. The lifetime migration is represented by the place of birth of migrants.

# GEOGRAPHIC AND CONTENT CONSIDERATIONS

Count discrepancies between 100% data and 20% sample data: Counts of the population, households, dwellings or families shown in tabulations based on a 20% sample may differ from those collected on a 100% basis for the following reasons:

(1) The exclusion of institutional residents: Institutional residents are defined as those individuals other than staff members and their families who live in institutional collective dwellings such as homes for the elderly, hospitals and correctional institutions. Detailed sample data were not collected from this sector of the population.

Les tableaux 4 à 9 présentent certaines caractéristiques des migrants interprovinciaux par groupe d'âge pour 1986. La partie "A" de chaque tableau renferme les données pour l'ensemble du Canada, tandis que la partie "B" présente les composantes de la migration interprovinciale pour les provinces et les territoires. La caractéristique de chaque tableau est donnée ci-dessous:

Tableaux 4A et 4B – État matrimonial
Tableaux 5A et 5B – Plus haut niveau de
scolarité atteint
Tableaux 6A et 6B – Principal domaine d'études
Tableaux 7A et 7B – Activité
Tableaux 8A et 8B – Grand groupe de
professions
Tableaux 9A et 9B – Division d'industrie

Le tableau 10 montre la matrice originesdestinations pour 1981-1986 (provinces et territoires) pour les migrants internes selon le groupe d'âge. Les éléments de la matrice qui se trouvent à l'intersection des lignes et des colonnes de la même province ou du même territoire donnent le nombre de migrants infraprovinciaux.

Le tableau 11 donne le nombre de migrants internes selon le statut migratoire, le groupe d'âge et la migration (durée de vie). La migration (durée de vie) est symbolisée par le lieu de naissance des migrants.

# FACTEURS DE GÉOGRAPHIE ET DE CONTENU

Divergences des chiffres entre les données intégrales et les données-échantillon (20%): Les chiffres de la population, des ménages, des logements ou des familles des tableaux utilisant les données-échantillon (20%) peuvent différer des données intégrales pour les raisons suivantes:

(1) L'exclusion des pensionnaires d'institution: Ces derniers sont définis comme les personnes autres que les membres du personnel et de leurs familles qui vivent dans les logements collectifs tels que les foyers pour personnes âgées, les hôpitaux et les établissements de correction. On n'a pas recueilli de données-échantillon détaillées pour ce segment de la population.

93-108 93-108

(2) Weighting: Data collected on a sample basis were weighted up to provide estimates of the entire population. However, weighted counts are subject to sampling variability. This means, for any given area, the weighted count may differ from that shown in tabulations containing data collected on a 100% basis. While the differences are relatively small for geographic areas with large populations, they can be greater for areas with small populations. For further information on this topic, please contact Social Survey Methods Division at Statistics Canada, Ottawa, Canada K1A 0T6 (613) 951-6929.

Users should also be aware that differences in counts may be due to the different subpopulations or universes for which the data are reported. For example, mobility data are reported for persons 5 years and over excluding those temporarily residing overseas; education and labour force data are reported for persons 15 years and over. Furthermore, data may be produced for subsets of these education and labour universes such as total labour force, employed labour force, etc. Similar differences may occur in tabulations for households, dwellings or families. The 1986 Census Dictionary (Catalogue No. 99-101E or F) provides more detailed information on universes or subpopulations by variable.

Incompletely enumerated Indian reserves and Indian settlements: On some Indian reserves or settlements, census enumeration was not permitted or was interrupted. Therefore, data are not available for these reserves and tables have been footnoted accordingly. This issue is discussed more fully in the SPECIAL NOTES section.

Additional information on geographic and content considerations, definitions of terms, explanations of data quality, etc., may be found at the end of this publication immediately following the tables (see pink pages). This information is presented separately in English and French sections for easier use.

(2) Pondération: Les données-échantillon sont pondérées afin d'obtenir des estimations de la population tout entière. Cependant, les chiffres pondérés se caractérisent par la variabilité d'échantillonnage, ce qui signifie que pour toute région donnée, le chiffre pondéré peut différer de celui qui figure dans les tableaux contenant les données intégrales. Bien que les différences soient relativement faibles pour les régions géographiques avant de fortes populations, elles peuvent être plus importantes dans le cas des régions avec de petites populations. Pour plus de renseignements sur ce sujet, veuillez communiquer avec la Division des méthodes d'enquêtes sociales de Statistique Canada, Ottawa, Canada K1A 0T6 (613) 951-6929.

Les utilisateurs doivent également noter que les différences de chiffres peuvent s'expliquer par les différences de sous-population ou d'univers dont les données sont publiées. Ainsi, les données de la mobilité sont publiées pour les personnes âgées de cinq ans et plus, excluant celles qui résident temporairement outre-mer; les données sur la scolarité et l'activité ne sont déclarées que pour les personnes âgées de 15 ans et plus. De plus, des données peuvent être produites pour les sousensembles de ces univers de la scolarité et de l'activité tels que la population active totale, la population active occupée, etc. Des différences similaires peuvent se glisser dans les tableaux pour les ménages, les logements ou les familles. Le Dictionnaire du recensement de 1986 99-101F ou E au catalogue) contient plus de renseignements détaillés sur les univers ou les sous-populations par variable.

Réserves indiennes et établissements indiens partiellement dénombrés: Dans certaines réserves indiennes et établissements indiens, les recenseurs n'ont pas eu la permission d'effectuer le dénombrement ou ont dû l'interrompre. Les données ne sont donc pas disponibles pour ces réserves et des notes au bas des tableaux apparaissent selon le besoin. Pour des précisions à ce sujet, voir la section NOTES SPÉCIALES.

Vous trouverez d'autres renseignements complémentaires sur les facteurs de géographie et de contenu, la définition détaillée des termes, des précisions sur la qualité des données, etc., à la fin de la publication, immédiatement après les tableaux (voir les pages roses). Ces renseignements sont présentés dans des sections française et anglaise distinctes, ce qui en facilite la consultation.

93-108 93-108

# 1986 CENSUS PRODUCTS AND SERVICES

The 1986 Census product line is designed to serve the diverse needs of our users. Using as a base the most demanded publications of past censuses, a full series of data, reference and analytical publications will be offered.

In addition to the tabulations shown in publications, census data are available in machine-readable form. In particular, there is a set of 44 basic summary tabulations for small geographic areas including enumeration areas, census tracts and census subdivisions. The data contained in the published profiles for census subdivisions and census divisions, census tracts, federal electoral districts, census metropolitan areas and census agglomerations are also available in machine-readable form.

While many tabulations are available from the planned output program, census tabulations can also be customized to individual users' needs. A range of products is offered, from predetermined basic data tabulations available for user-selected geographic areas, to complete custom tabulations which are developed to the exact requirements of the client. The products thus offer, on a cost-recovery basis, varying levels of flexibility in content, geography and medium.

# OTHER MOBILITY AND MIGRATION DATA PRODUCTS

There are several other products from the 1986 Census which contain mobility and migration data. These include:

### **NATION SERIES**

Language: Part 2 (Catalogue No. 93-103)

This publication provides data for the population 5 years and over by province of residence in 1986 and province of residence in 1981, showing distributions of mother tongue (Table 5) and home language (Table 6).

# PRODUITS ET SERVICES DU RECENSEMENT DE 1986

La gamme des produits du recensement de 1986 doit répondre aux besoins variés de nos utilisateurs. En fonction des publications les plus populaires des derniers recensements, nous offrirons une série complète de données, de documents de référence et d'ouvrages analytiques.

En plus des totalisations présentées dans les publications, les données du recensement sont disponibles sous forme lisible par machine. Notamment, une série de 44 totalisations sommaires de base existe pour les petites régions géographiques comprenant les secteurs de dénombrement, les secteurs de recensement et les subdivisions de recensement. Les données contenues dans les profils publiés pour les subdivisions de recensement et les divisions de recensement et les divisions de recensement, les circonscriptions électorales fédérales, les régions métropolitaines de recensement et les agglomérations de recensement sont également disponibles sous forme lisible par machine.

Même si plusieurs totalisations sont disponibles à partir du programme des produits déjà établi, des totalisations du recensement peuvent également être personnalisées selon les besoins de l'utilisateur. Il est possible de se procurer une gamme de produits allant des totalisations de données fondamentales, déterminées à l'avance, disponibles pour les régions géographiques choisies par l'utilisateur, à des totalisations entièrement personnalisées et préparées selon les exigences précises du client. Ainsi, ces produits permettent d'offrir, contre recouvrement des coûts, différents niveaux de souplesse en matière de contenu, de géographie et de support.

# AUTRES PRODUITS DE DONNÉES SUR LA MOBILITÉ ET LA MIGRATION

Il existe plusieurs autres produits du recensement de 1986 qui contiennent des données sur la mobilité et la migration. Ils sont:

# **SÉRIE: LE PAYS**

- Langue: Partie 2 (nº 93-103 au catalogue)

Cette publication renferme des données sur la population de 5 ans et plus selon la province de résidence en 1986 et la province de résidence en 1981 et donne la répartition de la langue maternelle (tableau 5) et la langue parlée à la maison (tableau 6).

- Families: Part 2 (Catalogue No. 93-107)

This publication presents mobility status for census families by type and for non-family persons. Table 10 shows mobility status of the husband by mobility status of the wife for husband-wife families. Table 15 presents lone-parent families by mobility status and sex of the parent, and Table 19 provides mobility status of non-family persons by sex. These tables provide data for Canada, the provinces and the territories.

# **DIMENSION SERIES**

- Profile of the Immigrant Population (Catalogue No. 93-155)

Table 11 of this publication presents mobility status of the immigrant population 5 years and over by period of immigration.

Census Metropolitan Areas (Catalogue No. 93-156)

Table 13 of this publication shows the components of internal migration (in-, out- and net migration) by age groups and sex for the population 5 years and over and for the labour force 15 years and over.

# **PROFILE SERIES**

This series includes mobility status data, as well as information on a wide range of other census variables. Data are presented for a variety of subprovincial areas: Census Divisions and Subdivisions (94-101 to 94-124), Federal Electoral Districts (94-125, 94-126, 94-133 and 94-134), Census Metropolitan Areas and Census Agglomerations (94-127 and 94-128), Censustracted Centres (Census Tracts and Component Subdivisions) (95-101 to 95-174), Urban and Rural Areas (94-129 and 94-130) and Labour Force Survey Economic Regions (94-131). Data for profiles are also available in machine-readable form. Note that the Urban and Rural Areas profile (94-130) includes data on urban or rural place of residence 5 years ago.

- Familles: Partie 2 (nº 93-107 au catalogue)

Cette publication donne la mobilité des familles de recensement selon le genre et des personnes hors famille. Le tableau 10 montre la mobilité de l'époux selon la mobilité de l'épouse pour les familles époux-épouse. Le tableau 15 présente les familles monoparentales selon la mobilité et le sexe du parent tandis que le tableau 19 donne la mobilité des personnes hors famille selon le sexe. Ces tableaux fournissent les données pour le Canada, les provinces et les territoires.

### **SÉRIE: DIMENSIONS**

- Profil de la population immigrante (nº 93-155 au catalogue)

Le tableau 11 de cette publication donne la mobilité de la population immigrante de 5 ans et plus selon la période d'immigration.

Régions métropolitaines de recensement (nº 93-156 au catalogue)

Le tableau 13 de cette publication donne les composantes de la migration interne (immigration interne, émigration interne et migration nette) selon le groupe d'âge et le sexe de la population de 5 ans et plus et de la population active de 15 ans et plus.

### **SÉRIE: PROFILS**

Cette série comprend des données sur la mobilité ainsi que des renseignements sur une vaste gamme d'autres variables du recensement. Les données sont présentées pour plusieurs régions infraprovinciales: divisions et subdivisions de recensement (94-101 à 94-124), circonscriptions électorales fédérales (94-125, 94-126, 94-133 et 94-134), régions métropolitaines de recensement et agglomérations de recensement (94-127 et 94-128), centres urbains divisés en secteurs de recensement (secteurs de recensement et subdivisions composantes) (95-101 à 95-174), régions urbaines et rurales (94-129 et 94-130) et régions économiques de l'Enquête sur la population active (94-131). Les données des profils sont également disponibles sous forme lisible par machine. Le profil sur les régions urbaines et rurales (94-130) comprend les données sur le lieu de résidence urbain ou rural 5 ans auparavant.

# **METROPOLITAN ATLAS SERIES**

A series of 12 publications covering Canada's major census metropolitan areas combine maps, graphs and text to present the 1986 Census data in an easy-to-understand format. Information on mobility and migration is included as well as a number of other key demographic, housing, social and economic themes. Maps summarize these complex statistics and pinpoint areas of concentration, facilitate comparisons and reveal changing patterns - helping us to better understand the cities we live in. Information is included for the following 12 large urban centres:

| St. John's  | (Cat. No. 98-101) |
|-------------|-------------------|
| Halifax     | (Cat. No. 98-102) |
| Québec      | (Cat. No. 98-103) |
| Montréal    | (Cat. No. 98-104) |
| Ottawa-Hull | (Cat. No. 98-105) |
| Toronto     | (Cat. No. 98-106) |
| Hamilton    | (Cat. No. 98-107) |
| Winnipeg    | (Cat. No. 98-108) |
| Regina      | (Cat. No. 98-109) |
| Calgary     | (Cat. No. 98-110) |
| Edmonton    | (Cat. No. 98-111) |
| Vancouver   | (Cat. No. 98-112) |

# **BASIC SUMMARY TABLES**

This series is designed to meet the needs of users who wish to study the characteristics of small areas. Tables provide information on a variety of census variables. The following mobility status table is available:

MB86B01 Population 5 years and over by age groups (8), sex (3) and mobility status (8)

The table is produced for the following four geographic levels: (i) enumeration areas and federal electoral districts; (ii) census subdivisions (municipalities) and census divisions (counties); (iii) census tracts and provincial census tracts; (iv) Canada, provinces, territories and census metropolitan areas.

# SÉRIE D'ATLAS MÉTROPOLITAINS

Cette série de 12 publications, portant sur les principales régions métropolitaines de recensement du Canada, réunit des cartes, des graphiques et des textes et présente les données du recensement de 1986 sous une forme facile à comprendre. Des renseignements sur la mobilité et la migration sont compris ainsi qu'un nombre de principales questions abordées, qu'elles soient démographiques, sociales ou économiques ou qu'elles touchent au logement. Des cartes présentent de façon synoptique ces statistiques complexes et permettent la délimitation des régions de concentration, facilitent les comparaisons et révèlent les tendances changeantes. Les utilisateurs ont ainsi une idée plus précise de leur ville. Ces renseignements sont compris pour les 12 grands centres urbains suivants:

| St. John's  | (nº 98-101 au catalogue) |
|-------------|--------------------------|
| Halifax     | (nº 98-102 au catalogue) |
| Québec      | (nº 98-103 au catalogue) |
| Montréal    | (nº 98-104 au catalogue) |
| Ottawa-Hull | (nº 98-105 au catalogue) |
| Toronto     | (nº 98-106 au catalogue) |
| Hamilton    | (nº 98-107 au catalogue) |
| Winnipeg    | (nº 98-108 au catalogue) |
| Regina      | (nº 98-109 au catalogue) |
| Calgary     | (nº 98-110 au catalogue) |
| Edmonton    | (nº 98-111 au catalogue) |
| Vancouver   | (nº 98-112 au catalogue) |

### TABLEAUX SOMMAIRES DE BASE

Cette série est conçue pour répondre aux besoins des utilisateurs qui désirent étudier les caractéristiques des petites régions. Les tableaux donnent des renseignements sur une gamme de variables du recensement. Le tableau suivant sur la mobilité est disponible:

MB86B01 Population de 5 ans et plus selon le groupe d'âge (8), le sexe (3) et la mobilité (8)

Le tableau est produit pour les quatre régions géographiques suivantes: (i) secteurs de dénombrement et circonscriptions électorales fédérales; (ii) subdivisions de recensement (municipalités) et divisions de recensement (comtés); (iii) secteurs de recensement et secteurs de recensement provinciaux; (iv) Canada, provinces, territoires et régions métropolitaines de recensement.

Data for the basic summary tables are available in machine-readable form to facilitate aggregation and manipulation.

### OTHER RELATED PRODUCTS

### **Non-census Products**

 Quarterly Demographic Statistics (Catalogue No. 91-002)

This publication contains quarterly estimates of interprovincial migration by province or territory of origin and destination.

 Postcensal Annual Estimates of Population by Marital Status, Age, Sex and Components of Growth for Canada, Provinces and Territories, June 1, 1987 (Catalogue No. 91-210)

This publication contains estimates of selected components of population growth including interprovincial migration by province or territory of origin and destination.

- Population Projections for Canada, Provinces and Territories, 1986-2011 (Catalogue No. 91-520, forthcoming)

This publication contains a range of population projections covering a period up to the year 2011 for the provinces and territories. Many tables and figures on the components of population growth are given, including some on total net migration (which includes net interprovincial and international migration).

# REFERENCE PRODUCTS

Users, who may require assistance in understanding and interpreting the data and geographic concepts appearing in this set of tabulations, should refer to the 1986 Census Dictionary (Catalogue No. 99-101E or F). The Dictionary provides a range of definitions for all variables and terms used in 1986 Census data products.

Les données des tableaux sommaires de base sont disponibles sous forme lisible par machine pour faciliter l'agrégation et la manipulation des données.

### **AUTRES PRODUITS CONNEXES**

### Produits non reliés au recensement

 Statistiques démographiques trimestrielles (nº 91-002 au catalogue)

Dans cette publication, on retrouve les estimations trimestrielles de la migration interprovinciale selon la province ou territoire d'origine et de destination.

 Estimations annuelles postcensitaires de la population suivant l'état matrimonial, l'âge, le sexe et composantes de l'accroissement, Canada, provinces et territoires, le 1er juin 1987 (nº 91-210 au catalogue)

Cette publication renferme des estimations sur certaines composantes de l'accroissement de la population, y compris la migration interprovinciale selon la province ou territoire d'origine et de destination.

 Projections démographiques pour le Canada, les provinces et les territoires, 1986-2011 (nº 91-520 au catalogue, à venir)

Cette publication présente une variété de projections sur la population pour une période allant jusqu'à l'année 2011, pour les provinces et les territoires. On y retrouve plusieurs tableaux et figures sur les composantes de l'accroissement de la population, certains sur la migration totale nette (y compris la migration interprovinciale nette et la migration internationale).

# PRODUITS DE RÉFÉRENCE

Les utilisateurs qui ont besoin d'aide pour comprendre et interpréter les données et les concepts géographiques figurant dans cette série de totalisations peuvent consulter le **Dictionnaire** du recensement de 1986 (nº 99-101F ou E au catalogue). Le dictionnaire donne les définitions de toutes les variables et de tous les termes utilisés dans les produits du recensement de 1986.

Further details on the products and services available from the census are provided in the 1986 Census Products and Services - Final Edition (Catalogue No. 99-103E or F).

All users wishing to obtain more information about the range of census products available to serve their needs are invited to contact their nearest Statistics Canada Regional Office. A representative will be glad to help. Addresses and phone numbers are listed on page xxxv.

# **SYMBOLS**

The following standard symbols are used in census publications:

- .. figures not available
- ... figures not appropriate or not applicable
- nil or zero
- amount too small to be expressed
- \* Excludes 1986 Census data for one or more incompletely enumerated Indian reserves or Indian settlements. For estimates of the missed population and dwellings, see Special Notes.

D'autres détails sur les produits et services du recensement sont fournis dans les **Produits et services du recensement de 1986 - Version définitive** (nº 99-103F ou E au catalogue).

Les utilisateurs qui désirent obtenir plus de précisions sur la gamme des produits du recensement adaptés à leurs besoins sont invités à communiquer avec le bureau régional de Statistique Canada le plus près. Un représentant sera heureux de vous aider. Les adresses et les numéros de téléphone sont donnés à la page Liii.

# SIGNES CONVENTIONNELS

Les signes conventionnels suivants sont employés uniformément dans les publications du recensement:

- .. nombres non disponibles
- ... n'ayant pas lieu de figurer
- néant ou zéro
- -- nombres infimes
- Ne comprend pas les données du recensement de 1986 pour une ou plusieurs réserves indiennes ou établissements indiens partiellement dénombrés. Pour une estimation de la population et des logements manquants, voir Notes spéciales.

#### **DEFINITIONS**

The definitions of geographic terms and census concepts are presented here in summary form only. Users should refer to the 1986 Census Dictionary (Catalogue No. 99-101E or F) for the full definitions and additional remarks related to these concepts and definitions.

#### **AGE**

Refers to the age at last birthday (as of the census reference date, June 3, 1986). This variable is derived from the date of birth question which asks day, month and year of birth. Persons who were unable to give the exact date of birth were asked to give the best possible estimate.

# INDUSTRY (BASED ON THE 1980 CLASSIFICATION)

Refers to the general nature of the business carried out in the establishment where the person worked, as indicated by the name of the employer and the kind of business, industry or service. Data are available for persons 15 years of age and over, excluding institutional residents. If not employed in the week prior to enumeration, the information relates to the job of longest duration since January 1, 1985. Persons with two or more jobs were to report the information for the job at which they worked the most hours.

Census industry data based on the 1980 Standard Industrial Classification have three levels of aggregation. There are 18 divisions (labelled A to R) which are subdivided into 75 major groups, which are, in turn, subdivided into 296 detailed groups.

Direct comparisons between 1986, 1981 and 1971 Census industry data are possible, based on the 1970 SIC. For further information refer to the definition of INDUSTRY (based on the 1970 classification) in the 1986 Census Dictionary (Cat. No. 99-101E).

#### LABOUR FORCE ACTIVITY

Refers to the labour market activity of the working age population who, in the week prior to June 3, 1986, were <u>employed</u> or <u>unemployed</u>. The remainder of the working age population is classified as <u>not in labour force</u>. Data are available for persons 15 years of age and over, excluding institutional residents.

#### **MARITAL STATUS**

Refers to the conjugal status of a person.

#### Now married (excluding separated)

Persons whose husband or wife is living, unless the couple is separated or a divorce has been obtained. Persons living common-law are considered as "Now married".

#### Separated

Persons who have been deserted or who have parted because they no longer want to live together, but have not obtained a divorce.

#### **Divorced**

Persons who have obtained a legal divorce and who have not remarried.

#### Widowed

Persons who have lost their spouse through death and who have not remarried.

### Never married (single)

Persons who have never married (including all persons less than 15 years of age) and persons whose marriage was annulled.

### **MOBILITY STATUS**

Refers to the relationship between a person's usual place of residence on Census Day and his/her usual place of residence five years earlier. On the basis of this relationship, the population is classified as non-movers and movers (mobility status). Within the category movers, a further distinction is made between non-migrants and migrants (migration status).

Non-movers are persons who, on Census Day, were living in the same dwelling they occupied five years earlier.

Movers are persons who, on Census Day, were living in a different dwelling than the one they occupied five years earlier.

Non-migrants are movers who, on Census Day, were living within the same census subdivision (CSD) they resided in five years earlier.

Migrants are movers who, on Census Day, were residing in a different CSD within Canada five years earlier (internal migrants) or who were living outside Canada five years earlier (external migrants).

With respect to <u>external migration</u>, <u>immigrants</u> (persons who were residing outside Canada five years earlier but in Canada on Census Day) are counted. <u>Emigrants</u> (persons residing in Canada five years ago but not on Census Day) are not counted.

With respect to internal migration, different types of migration are derived based on various aggregations of CSDs. Census subdivision aggregations commonly used include Census Divisions (CDs), Provinces (including the Territories), Census Metropolitan Areas (CMAs) and Census Agglomerations (CAs) showing in-migration, out-migration, net internal migration and migration streams.

In-migration is defined as a movement into a CSD (or CSD aggregation) from elsewhere in Canada, relative to the five-year interval. Persons who made such a move are called in-migrants.

Out-migration is defined as a movement out of a CSD (or CSD aggregation) to elsewhere in Canada, relative to the five-year interval. Persons who made such a move are called out-migrants.

Net internal migration refers to the number of inmigrants into a CSD (or CSD aggregation) minus the number of out-migrants from a CSD (or CSD aggregation) relative to the five-year interval.

Interprovincial migration refers to movements from one province or territory to another involving a change of residence. An interprovincial migrant is a person who, in the five-year migration interval, takes up residence in another province or territory. Such a person is an out-migrant with reference to his province or territory of origin, and an in-migrant with reference to his province or territory of destination.

Net interprovincial migration refers to the number of in-migrants into a province or territory minus the number of out-migrants from the same area relative to the five-year interval.

<u>Migration streams</u> refers to the total number of migrations made during the five-year migration interval which have a common area of origin and a common destination.

Canadian residents stationed outside Canada in the Armed Forces or the diplomatic service as well as inmates of institutions are excluded from the population universe from which mobility data are collected. As a result they do not appear in any census tables dealing with mobility status. Those aged 0-4 on June 3, 1986 are also excluded from all census tables dealing with mobility status as the five-year reference period precludes this segment of the population.

<u>Lifetime migration</u>. The place of birth question asks the province of birth if born in Canada or the specific country according to boundaries at the census date if born outside Canada. On the basis of the answer to this question, it is possible to classify the population into two groups:

- (a) <u>Lifetime migrants</u> are defined as persons who were enumerated in a province different from the place where they were born (each province or outside Canada).
- (b) <u>Lifetime non-migrants</u> are defined as persons who were enumerated in the province where they were born.

# OCCUPATION (BASED ON 1980 CLASSIFICATION)

Refers to the kind of work persons were doing during the reference week, as determined by their reporting of their kind of work and the description of the most important duties in their job. Data are available for persons 15 years of age and over, excluding institutional residents. If the person did not have a job during the week prior to enumeration, the data relate to the job of longest duration since January 1, 1985. Persons with two or more jobs were to report the information for the job at which they worked the most hours.

Occupation data are based on a classification structure composed of three levels of aggregation. There are 22 major groups which are subdivided into 80 minor groups. These, in turn, contain a total of 514 detailed occupations.

Direct comparisons of 1981 and 1986 occupation data are possible. For comparison with 1971 Census data, adjustments must be made to the universe and classification. For further information, refer to the definition of OCCUPATION (based on 1971 classification) in the 1986 Census Dictionary (Cat. No. 99-101E).

#### PLACE OF BIRTH

Refers to specific provinces if born in Canada, or to specific countries if born outside Canada. Respondents were asked to indicate their place of birth according to boundaries at the census date.

#### PLACE OF RESIDENCE

Refers to the place where a person usually lived. Persons enumerated away from their permanent residence, due to business, vacation, etc., were counted at their permanent residence. Persons with no usual place of residence on Census Day were enumerated where found.

#### **PROVINCE**

Refers to the major political division of Canada. From a statistical point of view, it is a basic unit for which data are tabulated and cross-classified. In census publications, provincial tables include the Yukon Territory and the Northwest Territories.

#### PROVINCE OF RESIDENCE 5 YEARS AGO

Refers to the person's usual province of residence on June 1, 1981, five years prior to Census Day.

#### SCHOOLING: HIGHEST LEVEL OF

Refers to the highest grade or year of elementary or secondary school attended, or the highest year of university or other non-university completed. University education is considered to be above other non-university. Also, the attainment of a degree, certificate or diploma is considered to be at a higher level than years completed or attended without an educational qualification.

# SCHOOLING: MAJOR FIELD OF STUDY (MFS)

Refers to the predominant discipline or area of learning or training of a person's highest postsecondary degree, certificate or diploma. The major field of study classification structure consists of 10 broad or major categories - educational, recreational and counselling services; fine and applied arts; humanities and related fields; social sciences and related fields; commerce, management and business administration; agricultural and biological sciences/technologies; engineering and applied sciences; engineering and applied science technologies and trades; health professions, sciences and technologies; and mathematics and physical sciences. This structure is, in turn, subdivided into over 100 "minor" classification categories and over 425 "unit" groups.

#### SEX

Refers to the gender of the respondent.

#### SAMPLING AND WEIGHTING

The 1986 Census data were collected either on a 100% basis (i.e. for all households) or on a sample basis (i.e. from only a random sample of households) with data weighted to provide estimates of the entire population. The information in this report was collected on a 20% sample basis and weighted up to compensate for sampling. All table headings are noted accordingly. (Note that, on Indian reserves and in remote areas, all data were collected on a 100% basis. In the Northwest Territories, data were collected on a 100% basis but, for the communities of Fort Smith, Hay River, Pine Point and Yellowknife, the data were processed on a 20% basis.)

For any given geographic area, the weighted population, household, dwelling or family, total or subtotal may differ from that shown in reports containing data collected on a 100% basis. Such variation (in addition to the effect of random rounding) will be due to sampling.

### **DATA QUALITY**

#### **GENERAL**

The 1986 Census was a large and complex undertaking and, while considerable effort was taken to ensure high standards throughout all collection and processing operations, the resulting estimates are inevitably subject to a certain degree of error. Users of census data should be aware such error exists, and have some appreciation of its main components, so that they can assess the usefulness of census data for their purposes and the risks involved in basing conclusions or decisions on these data.

Errors can arise at virtually every stage of the census process from the preparation of materials, through the listing of dwellings and data collection to processing. Some errors occur more or less at random, and when the individual responses are aggregated for a sufficiently large group, such errors tend to cancel out. For errors of this nature, the larger the group, the more accurate the corresponding estimate. It is for this reason that users are advised to be cautious when using small estimates. There are some errors, however, which might occur more systematically, and which result in "biased" estimates. Because the bias from such errors is persistent no matter how large the group for which responses are aggregated, and because

93-108

bias is particularly difficult to measure, systematic errors are a more serious problem for most data users than the random errors referred to previously.

For census data in general, the principal types of error are as follows:

- coverage errors, which occur when dwellings and/or individuals are missed, incorrectly included or double counted:
- non-response errors, which result from the fact that responses cannot be obtained from a small number of households and/or individuals, because of extended absence or some other reason;
- response errors, which occur when the respondent, or sometimes the Census Representative, misunderstands a census question, and records an incorrect response;
- processing errors, which can occur at various steps including: coding, when "write-in" responses are transformed into numerical codes by clerks; data capture, when responses are transferred from the census questionnaire to computer tapes by key-entry operators; and imputation, when a "valid", but not necessarily correct, response is inserted into a record by the computer to replace missing or "invalid" data ("valid" and "invalid" referring to whether or not the response is consistent with other information on the record);
- sampling errors, which apply only to the supplementary questions on the "long form" asked of a one-fifth sample of households, and which arise from the fact that the results for these questions, when weighted up to represent the whole population, inevitably differ somewhat from the results which would have been obtained if these questions had been asked of all households.

The above types of error each have both random and systematic components. Usually, however, the systematic component of sampling error is very small in relation to its random component. For the other non-sampling errors, both random and systematic components may be significant.

#### COVERAGE ERRORS

Coverage errors affect the accuracy of the census counts, that is the sizes of the various census universes: population, families, households and dwellings. While steps have been taken to correct certain identifiable errors, the final counts are still subject to some degree of error resulting from persons or dwellings being missed, incorrectly included in the census or double counted.

Missed dwellings or persons result in undercoverage. Dwellings can be missed because of misunderstanding of enumeration area (EA) boundaries, or because dwellings are hidden or appear uninhabitable. Persons can be missed when their dwelling is missed or classified as vacant, or when individual household members are omitted from the questionnaire because the respondent misinterprets the instructions on whom to include. Some individuals may be missed because they have no usual residence and did not spend census night in any dwelling.

Dwellings or persons that are incorrectly included or double counted result in overcoverage. Overcoverage of dwellings can occur when structures unfit for habitation are listed as dwellings, or when units which do not meet the census definition of a dwelling are listed separately, instead of being treated as part of a larger dwelling. Double counting of dwellings can occur, for example, because of ambiguity over EA boundaries. Persons can be double counted because their dwelling is double counted or because the guidelines on whom to include on the questionnaire have been misunderstood. Occasionally, someone who is not a Canadian resident may, incorrectly, be enumerated in the census. On average, overcoverage is less likely to occur than undercoverage and, as a result, counts of dwellings and persons are likely to be slightly underestimated.

In 1986, four studies were undertaken to measure different aspects of coverage error. First, a sample of dwellings listed as vacant were revisited to verify that they really were vacant on Census Day. Adjustments have been made to the final census counts for households missed because their dwelling was incorrectly classified as vacant. Secondly, a sample of persons enumerated as temporary residents was selected to verify whether or not they were enumerated at their usual place of residence. Based on this sample, estimates were obtained of the number of persons missed because they were temporarily absent from their usual place of residence. Corresponding adjustments were made to the final population counts. Despite these adjustments, the final counts are still subject to some undercoverage. For Canada as a whole and for each province, the magnitude of this residual undercoverage in the 1986 Census is being measured by means of a special study known

93-108 93-108

as the Reverse Record Check. Undercoverage tends to be higher for certain segments of the population such as young adult males and recent immigrants. Undercoverage is offset to some degree by overcoverage errors, and in 1986 for the first time a special study was carried out to investigate overcoverage errors.

#### OTHER NON-SAMPLING ERRORS

While coverage errors affect the number of units in the various census universes, other errors affect the characteristics of those units.

Sometimes, it is not possible to obtain a complete response from a household, even though the dwelling was identified as occupied and a questionnaire dropped off. The household members may have been away throughout the census period or, in rare instances, the householder may have refused to complete the form. More frequently, the questionnaire is returned but information is missing for some questions or individuals. Considerable effort is devoted to ensuring as complete a response as possible. Census Representatives edit the questionnaires and follow up any missing information. The Census Representative's work is then checked by both a supervisor and a quality control technician. Despite this, at the end of the collection stage, a small number of responses are missing. Although missing entries are eliminated during processing, there remains some potential non-response error. This is particularly serious if the non-respondents differ in some respects from the respondents since, as described in a later paragraph, a missing value is replaced by the corresponding entry for a "similar" record. If respondents and non-respondents differ in terms of the characteristics involved, this procedure will result in non-response bias.

Even when a response is obtained, it may not be entirely accurate. The respondent may have misinterpreted the question or may have guessed the answer, especially when answering on behalf of another, possibly absent, household member. Such errors are referred to as response errors. While response errors usually arise from inaccurate information provided by respondents, they can also result from mistakes by the Census Representative when completing certain parts of the questionnaire such as structural type of dwelling, or when calling back to obtain a missing response.

Some of the questions on the census document require a verbal response to be written in. During regional processing, these "write-in" entries are given a numeric code. Coding errors can occur, especially when the code list is extensive (as with, for example, language, ethnic origin, industry and occupation), and when the written response is ambiguous, incomplete or difficult to read. Coding errors are controlled, though not completely eliminated, by verifying a sample of each coder's work and taking corrective action where necessary.

After the coding and certain other manual processing steps are complete, the information on the questionnaires is key-entered onto a computer file. Two procedures are used to control the number of <u>data capture errors</u>. First, certain edits (such as range checks) are performed as the data are keyed. Secondly, a sample from each batch of documents is re-keyed and compared with the original entries. If there is more than a specified number of errors among the original entries, the whole batch is re-keyed.

Once the data have been captured, they are sent to Ottawa where they undergo a series of computer checks to identify missing or inconsistent responses. In the case of inconsistent responses, it has first to be decided which response is to be considered invalid. Invalid or missing responses must then be replaced by valid responses, that is, responses which are consistent with other data on the record. For a small proportion of cases, the correct response can be inferred from other data on the record. In most cases, however, this is not possible and a valid response is obtained from a 'donor" record selected at random from among a group of consistent records which are similar to the invalid record in terms of a number of related characteristics. There is, of course, no guarantee that the imputed value will necessarily be the correct response for the individual concerned. However, provided the missing or invalid records are similar, on average, to the valid records, any imputation errors will more or less cancel out when results are tabulated for a sufficiently large geographical area or subgroup of the population.

Various studies are being carried out to evaluate the quality of the responses obtained in the 1986 Census. For each question, response rates and edit failure rates have been calculated. These can be useful in identifying the potential for non-response and other errors. Also, tabulations from the 1986 Census have been or will be compared with corresponding estimates from previous censuses, from sample surveys (such as the Labour Force Survey) and from various administrative records (such as birth registrations and municipal assessment records). Such comparisons can indicate potential quality problems or at least discrepancies between the sources.

In addition to these aggregate-level comparisons, there are some micromatch studies in progress, in which census responses are compared with another source of information at the individual record level. For certain "stable" characteristics (such as age, sex, mother tongue, place of birth, etc.), the responses obtained in the 1986 Census, for a sample of individuals, are being compared with those for the same individuals in the 1981 Census. Also, following the 1986 Census, a sample of persons was re-enumerated, primarily to determine overcoverage rates. At the same time, however, interviewers asked a series of detailed questions on language, ethnic origin and structural type of dwelling, the responses to which will be compared with the corresponding census responses in order to identify, and hopefully understand, response errors.

#### **SAMPLING ERRORS**

Estimates obtained by weighting up responses collected on a sample basis are subject to error due to the fact that the distribution of characteristics within the sample will not usually be identical to the distribution of characteristics within the population from which the sample has been selected.

The potential error introduced by sampling will vary according to the relative scarcity of the characteristics in the population. For large cell values the potential error due to sampling, as a proportion of the cell value, will be relatively small. For small cell values this potential error, as a proportion of the cell value, will be relatively large.

The potential error due to sampling is usually expressed in terms of the so called "standard error". This is the square root of the average, taken over all possible samples of the same size and design, of the squared deviation of the sample estimate from the value for the total population.

The table below provides approximate measures of the standard error due to sampling. These measures are intended as a general guide only. Users wishing to determine the approximate error due to sampling for any given cell of data, based upon the 20% sample, should choose the standard error value in the column of the standard error table whose heading is closest to the value of the given cell in the census tabulation. When using the obtained standard error value, in general the user can be reasonably certain that, for the enumerated population, the true value (discounting all forms of error other than sampling) lies within plus or minus three times the standard error (e.g., for a cell value of 1,000 the range would be 1,000 + or - 3X65 or 1,000 + or - 195).

The standard errors given in the table below will not apply to population or universe (persons, households, dwellings or families) totals or subtotals for the geographic area under consideration (see Sampling and Weighting). The effect of sampling for these cells can be determined by comparison with a corresponding 100% publication.

The effect of the particular sample design and weighting procedure used in the 1986 Census will vary, however, from one characteristic to another and from one geographic area to another. The standard error values in the table below may, therefore, understate or overstate the error due to sampling.

For further information on the quality of census data, contact Social Survey Methods Division at Statistics Canada, Ottawa, Canada K1A 0T6 (613) 951-6929.

# CONFIDENTIALITY AND RANDOM ROUNDING

The figures shown in this report have been subjected to a confidentiality procedure known as "random rounding" to prevent the possibility of associating small figures with any identifiable individual. Under this method, all figures including totals are randomly rounded (either up or down) to a multiple of "5". This technique provides strong protection against direct, residual or negative disclosures without adding significant

Table: Approximate Standard Error Due to Sampling for 1986 Census Sample Data

|                   |    | · · · · · · · · · · · · · · · · · · · |     |     |       | Cell  | Value |        | -      |        |         |         |
|-------------------|----|---------------------------------------|-----|-----|-------|-------|-------|--------|--------|--------|---------|---------|
| Approximate       | 50 | 100                                   | 200 | 500 | 1,000 | 2,000 | 5,000 | 10,000 | 20,000 | 50,000 | 100,000 | 500,000 |
| Standard<br>Error | 15 | 20                                    | 30  | 45  | 65    | 90    | 140   | 200    | 280    | 435    | 600     | 1,300   |

error to the census data. However, since totals are independently rounded, they do not necessarily equal the sum of individual rounded figures in distributions. Also, minor differences can be expected for corresponding totals and cell values in various census tabulations. Similarly, percentages, which are calculated on rounded figures, do not necessarily add to 100. Percentage distributions and rates for the most part are based on rounded data, while percentage changes and averages are based on unrounded data.

Of concern to some users is that small cell counts may suffer a significant distortion as a result of random rounding. This distortion is the protection against disclosure and individual data cells containing these small numbers may lose their precision as a result. Since the rounding is of a random nature, however, when data cells are reaggregated by the user, the rounding errors tend to cancel out. Distortions may be further reduced by building in the appropriate subtotals into tabulations. Also available is the option of requesting custom tabulations from the census microdata bases. With custom products, random rounding occurs after data cells have been aggregated thus minimizing any distortion.

In addition to random rounding, procedures such as area and cell suppression have been adopted to further protect the confidentiality of individual responses.

With area suppression, all characteristic data for the geographic area are deleted and replaced with the symbol (XXX). The extent to which data are suppressed depends upon whether the area is a standard geographic area, i.e. aggregated from enumeration areas (federal electoral districts. census divisions, census subdivisions, census tracts, etc.) or a non-standard area specified by the user for a custom tabulation. Data are deleted if the population is less than 40 persons for standard areas and less than 100 persons for non-standard areas. For tables involving income distributions, the suppression of data is extended to geographic areas with a total population of less than 250. Suppressed data are, however, included in the appropriate higher aggregate subtotals and totals. This technique is being implemented for all products involving subprovincial data (i.e. Profile series, basic summary data products, semi-custom and custom data products) collected on a 100% or 20% sample basis.

Note: For data collected on a 20% sample basis, area suppression is based on the non-institutional population rather than the total population since sample data were not collected for the institutional population.

With cell suppression, the minimum acceptable value for a cell is specified. All cell values below the designated cut-off are deleted and replaced by the symbol (XXX). However, the suppressed data are included in the appropriate higher aggregate subtotals and totals. For 1986 data products, two different methods of cell suppression are being implemented. For publications in "The Nation" and "Dimensions" series involving income, detailed occupation or detailed industry, the distribution is being suppressed where less than 250 persons or units are involved. In semi-custom and custom tabulations of variables collected on a sample basis, all cells with a value of "5" (after random rounding) are being suppressed.

#### SPECIAL NOTES

## POPULATION COUNTS BASED ON USUAL RESIDENCE

The population counts shown here for a particular area represent the number of Canadians whose usual place of residence is in that area, regardless of where they happened to be on Census Day. Also included are any Canadians staying in a dwelling in that area on Census Day and having no usual place of residence elsewhere in Canada. In most areas, there is little difference between the number of usual residents and the number of people staying in the area on Census Day. For certain places, however, such as tourist or vacation areas, or those including large work camps, the number of people staying in the area at any particular time could significantly exceed the number of usual residents shown here.

# INCOMPLETELY ENUMERATED INDIAN RESERVES AND INDIAN SETTLEMENTS

On some Indian reserves and Indian settlements in the 1986 Census, enumeration was not permitted or was interrupted before it could be completed.

Data for 1986 are therefore not available for the incompletely enumerated reserves and settlements and are not included in tabulations. Data for geographic areas containing one or more of these reserves or settlements are therefore noted accordingly. Because of the missing data, users are cautioned that for affected geographic areas, comparisons (e.g., percentage change) between 1981 and 1986 are not exact. While for higher level geographic areas (Canada, provinces, census metropolitan areas and census agglomerations) the impact of the missing data is very small, the impact can increase for smaller areas containing a larger proportion of affected reserves and settlements.

While it is not possible to estimate the population of each incompletely enumerated reserve, estimates of the missed total population and total occupied dwellings at the provincial level have been made and are shown in the Appendix.

Note, however, that it was not possible to estimate any characteristics of the missed population, even at the provincial level.

Additional information on this subject can be obtained by referring to the User Information Bulletin, Number 1, "Summary of the Methodology for Estimating the Population and Occupied Private Dwellings on Incompletely Enumerated Indian Reserves".

### MOBILITY STATUS AND INTER-PROVINCIAL MIGRATION

A migrant is anyone who, five years earlier, did not have his/her usual place of residence within the census subdivision (CSD) where he/she was enumerated. Please note that the geographic areas of CSDs reflect boundaries as of January 1, 1986, the geographic reference date for the 1986 Census of Canada.

At the CSD level, users are advised to exercise caution in the use of data on migrants, particularly for suburban municipalities within large metropolitan areas. Counts for total migrants, including in- and out-migrants, could be distorted due to suspected types of mis-response such as: (a) respondents in metropolitan areas reporting the main city rather than the municipality they actually lived in five years earlier (e.g., reported Toronto instead of Scarborough); (b) respondents failing to indicate a move from a different CSD if they perceived that they were still in the same main city (e.g., moved from Toronto to Scarborough but indicated that they still lived in the same municipality); and (c) respondents reporting moves according to out-of-date boundaries.

The concept of "migrant" is defined at the CSD level. For geographic levels below the CSD, such as enumeration areas (EAs) and census tracts (CTs), please note that the distinction between the migrant and non-migrant population refers to the corresponding CSD of the EA or CT. For example, migrants of a CT are those persons who moved from a different CSD, while non-migrants are those who moved within the same CSD - they moved either between different CTs or within the same CT.

Names and boundaries of particular census subdivisions may undergo trivial or, in some cases, substantial modifications during the five-year

Labour Force Activity, 1981 Census of Canada

| Unemployed                     | 167,240                                  | 191,680                                   | 14.61       |
| Not in the labour force        | 1,229,630                                | 1,205,190                                 | - 1.99      |
| Labour force 20 years and over | 10,980,205                               | 10,982,890                                | 0.02        |
| Employed                       | 10,261,210                               | 10,261,210                                | no change   |
| Unemployed                     | 718,995                                  | 721,685                                   | 0.37        |
| Not in the labour force        | 5,325,505                                | 5,322,815                                 | - 0.05      |

intercensal period; therefore, comparisons of data for a specific subprovincial area between any two censuses will not be valid unless these changes, if any, are accounted for.

Details of intercensal boundary changes can be found in the **Standard Geographical** Classification (Cat. No. 12-573).

Boundaries and CSD components of CMAs and CAs will often undergo modifications during the intercensal period; therefore, comparisons of data for specific areas between any two censuses will not be valid unless these changes are accounted for. A publication is available which provides comparisons of 1986 CMAs and CAs, and their 1981 versions. Census Metropolitan Areas and Census Agglomerations: A 1986 and 1981 Comparison (Cat. No. 99-105E or F) lists census subdivisions that make up the 1986 version of each CMA and CA, and shows corresponding delineations for 1981.

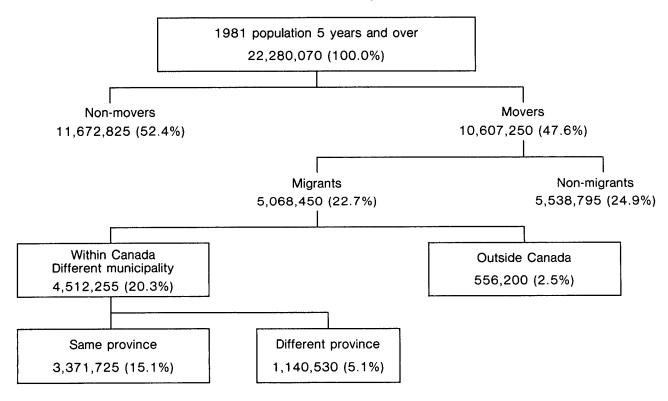

#### LABOUR FORCE ACTIVITY

The census labour force activity concepts have not changed between 1981 and 1986. However, the processing of the data was modified causing some differences. In the 1986 Census, contrary to previous censuses, a question on school attendance was not asked. This question was used to edit the labour force activity variable, specifically unemployment. Consequently, the processing differences affect the unemployed population and are mostly concentrated among the 15-19-year age group. The table on the previous page indicates the magnitude of the effect upon the data, at the Canada level.

<sup>(1)</sup> Includes all private dwellings occupied by usual residents as well as private dwellings occupied solely by foreign and/or temporary residents.

#### ACCESSIBLE FROM COAST TO COAST

Statistics Canada's regional reference centres provide a full range of the census products and services. Each reference centre is equipped with a library and a sales counter where users can consult or purchase census publications, microcomputer diskettes, microfiche, maps and more. Each centre has facilities to retrieve information from Statistics Canada's computerized data retrieval systems – CANSIM and TELICHART. A telephone inquiry service is also available with toll-free numbers for regional clients outside local calling areas. Many other services - from seminars to consultations - are offered. Call or write your regional reference centre for information. For a brief description of the products and services available from the 1986 Census, consult the section on Guidelines for Using This Publication.

# DOCUMENTS DE RÉFÉRENCE EN FRANÇAIS

|  |  | • |
|--|--|---|
|  |  |   |

### **DÉFINITIONS**

Seul un résumé des définitions des termes géographiques et des concepts du recensement est présenté ici. Les utilisateurs doivent consulter le **Dictionnaire du recensement de 1986** (nº 99-101F ou E au catalogue) pour les définitions complètes et les observations additionnelles pertinentes.

#### **ACTIVITÉ**

Activité sur le marché du travail des personnes en âge de travailler qui, au cours de la semaine précédant le 3 juin 1986, faisaient partie de la population active occupée ou de la population active en chômage. Les autres personnes, en âge de travailler, qui n'étaient ni occupées ni en chômage sont classées dans la catégorie des inactifs. Les données sont disponibles pour les personnes de 15 ans et plus, à l'exclusion des pensionnaires d'institution.

#### ÂGE

Âge au dernier anniversaire de naissance (à la date de référence du recensement, le 3 juin 1986). Cette variable est établie d'après la réponse à la question sur la date de naissance qui demande le jour, le mois et l'année de naissance. Les personnes qui ne connaissaient pas la date exacte de leur naissance devaient donner la meilleure estimation possible.

#### **ÉTAT MATRIMONIAL**

Situation conjugale d'une personne.

#### Actuellement marié(e) (sauf séparé(e))

Personne dont le conjoint est vivant, à moins que le couple ne soit séparé ou divorcé; les personnes vivant en union libre sont considérées comme actuellement mariées.

#### Séparé(e)

Personne qui a été abandonnée, ou qui est séparée de son conjoint, légalement ou non, parce qu'elle ne veut plus vivre avec cette personne, mais qui n'a pas obtenu de divorce.

#### Divorcé(e)

Personne qui a obtenu un divorce et qui ne s'est pas remariée.

#### Veuf(ve)

Personne dont le conjoint est décédé et qui ne s'est pas remariée.

#### Célibataire (jamais marié(e))

Personne qui n'a jamais été mariée (y compris toute personne de moins de 15 ans), ou personne dont le mariage a été annulé.

# INDUSTRIE (SELON LA CLASSIFICATION DE 1980)

Nature générale de l'activité de l'établissement où travaille le recensé, déterminée par le nom de l'employeur et par le genre d'entreprise, d'industrie ou de service. Les données sont disponibles pour les personnes de 15 ans et plus, à l'exclusion des pensionnaires d'institution. Si le recensé n'avait pas d'emploi au cours de la semaine précédant le recensement, il devait donner des renseignements sur l'emploi qu'il avait occupé le plus longtemps depuis le 1er janvier 1985. Les personnes qui avaient deux emplois ou plus devaient fournir des renseignements sur celui auquel elles avaient consacré le plus grand nombre d'heures de travail.

Les données sur l'industrie sont groupées selon la Classification type des industries de 1980; il s'agit d'une classification à trois niveaux d'agrégation: 18 divisions (identifiées A à R) qui se subdivisent en 75 grands groupes et, par la suite, en 296 groupes.

Il est possible de procéder à des comparaisons directes des données sur l'industrie tirées des recensements de 1971, 1981 et 1986, en se fondant sur la CAÉ de 1970. Pour plus de détails à ce sujet, voir la définition d'INDUSTRIE (selon la classification de 1970) dans le Dictionnaire du recensement de 1986, nº 99-101F au catalogue.

#### LIEU DE NAISSANCE

Province de naissance, pour les personnes nées au Canada, ou pays de naissance, pour les personnes nées à l'extérieur du Canada. Les recensés devaient déclarer leur lieu de naissance d'après les frontières au jour du recensement.

#### LIEU DE RÉSIDENCE

Indique l'endroit où vit actuellement une personne. Les personnes recensées ailleurs qu'à leur résidence habituelle parce qu'elles étaient en voyage d'affaires, en vacances, etc., sont comptées à leur lieu de résidence habituelle. Les personnes qui n'avaient aucun lieu de résidence habituelle le jour du recensement ont été recensées à l'endroit où elles se trouvaient.

### MOBILITÉ

La mobilité est déterminée d'après la réponse à la question concernant le domicile habituel d'une personne le jour du recensement et son domicile habituel cinq ans plus tôt. Cette variable permet de classer la population en <u>personnes n'ayant pas déménagé</u> et <u>personnes ayant déménagé</u> (mobilité). Les <u>personnes ayant déménagé</u> peuvent également être classées comme <u>non-migrants</u> ou <u>migrants</u> (statut migratoire).

Les <u>personnes n'ayant pas déménagé</u> sont celles qui, le jour du recensement, demeuraient dans le même logement que celui qu'elles occupaient cinq ans plus tôt.

Les <u>personnes ayant déménagé</u> sont celles qui, le jour du recensement, demeuraient dans un logement différent de celui qu'elles occupaient cinq ans plus tôt.

Les <u>non-migrants</u> sont des personnes ayant déménagé qui, le jour du recensement, demeuraient dans la même subdivision de recensement (SDR) que celle où elles résidaient cinq ans plus tôt.

Les <u>migrants</u> sont des personnes ayant déménagé qui, le jour du recensement, résidaient toujours au Canada mais dans une subdivision de recensement différente de celle où elles résidaient cinq ans plus tôt (<u>migrants internes</u>) ou encore ce sont les personnes qui résidaient à l'extérieur du Canada cinq ans plus tôt (<u>migrants externes</u>).

En ce qui concerne la <u>migration externe</u>, on a pris en compte les <u>immigrants</u>, c'est-à-dire les personnes qui vivaient à l'extérieur du Canada cinq ans avant le recensement, mais résidaient au Canada le jour du recensement. Par ailleurs, on n'a pas pris en compte les <u>émigrants</u>, c'est-à-dire les personnes qui résidaient au Canada cinq ans avant le recensement mais non le jour du recensement.

En ce qui a trait à la <u>migration interne</u>, on a établi différents <u>types de migration</u> à partir de divers regroupements de subdivisions de recensement (SDR), dont les plus courants sont les divisions de recensement (DR), les provinces (y compris les territoires), les régions métropolitaines de recensement (RMR) et les agglomérations de recensement (AR), qui font connaître l'<u>immigration interne</u>, l'<u>émigration interne</u>, la <u>migration interne</u> nette et les <u>courants migratoires</u>.

L'<u>immigration interne</u> est tout déplacement, pendant la période intercensitaire, vers une SDR particulière (ou un regroupement de SDR particulier) à partir d'un lieu d'origine quelconque au Canada. Les personnes qui ont effectué des déplacements de ce genre sont des <u>immigrants</u> internes.

L'émigration interne est tout déplacement, pendant la période intercensitaire, à partir d'une SDR particulière (ou d'un regroupement de SDR particulier) vers un lieu de destination quelconque au Canada. Les personnes qui ont effectué des déplacements de ce genre sont des <u>émigrants</u> internes.

La <u>migration interne nette</u> est le nombre d'<u>immigrants internes</u>, c'est-à-dire les personnes qui sont arrivées dans une nouvelle SDR (ou regroupement de SDR) au cours de la période intercensitaire, moins le nombre d'<u>émigrants internes</u>, c'est-à-dire ceux qui ont quitté une SDR (ou un regroupement de SDR) pendant la même période.

La migration interprovinciale est l'ensemble des déplacements, d'une province ou d'un territoire vers un autre, accompagnés d'un changement de résidence. Le migrant interprovincial est l'individu qui effectue, au cours de la période intercensitaire, un tel déplacement. Cet individu est un émigrant interne pour sa province ou son territoire d'origine et un immigrant interne pour sa province ou son territoire de destination.

La migration nette interprovinciale est le nombre d'immigrants internes, c'est-à-dire les personnes qui sont arrivées dans une nouvelle province ou territoire au cours de la période intercensitaire, moins le nombre d'émigrants internes, c'est-à-dire ceux qui ont quitté ce même territoire pendant la même période.

Les <u>courants migratoires</u> désignent l'ensemble des migrations, au cours de la période intercensitaire, qui ont le même lieu d'origine et le même lieu d'arrivée.

Les diplomates et les citoyens canadiens au sein des Forces armées à l'étranger ainsi que les pensionnaires d'institution sont exclus de l'univers auprès duquel les données sur la mobilité sont recueillies. Ils ne figurent donc pas dans les tableaux de données du recensement qui portent sur la mobilité. Les enfants âgés de 4 ans ou moins le 3 juin 1986 sont également exclus de tous les tableaux du recensement qui portent sur la mobilité en raison de la période de référence de cinq ans.

Migration à vie. La question sur le lieu de naissance demande d'indiquer la province de naissance si le répondant est né au Canada ou le pays de naissance précis selon ses limites le jour du recensement, si le répondant est né en dehors du Canada. La réponse à cette question permet de classer la population visée en deux groupes:

- a) Les <u>migrants à vie</u> sont ceux qui ont été dénombrés dans une province autre que leur lieu de naissance (chaque province ou en dehors du Canada).
- b) Les <u>non-migrants à vie</u> sont ceux qui ont été dénombrés dans leur province de naissance.

# PROFESSION (SELON LA CLASSIFICATION DE 1980)

Genre de travail que faisaient les personnes pendant la semaine de référence. Le genre de travail exécuté est défini à partir du type d'emploi déclaré par le recensé et de la description des tâches les plus importantes qui s'y rattachent. Ces données sont disponibles pour les personnes de 15 ans et plus, à l'exclusion des pensionnaires d'institution. Si le recensé n'avait pas d'emploi au cours de la semaine précédant le recensement, les données portent sur l'emploi qu'il/elle a occupé le plus longtemps depuis le 1er janvier 1985. Les personnes qui avaient deux emplois ou plus devaient donner des renseignements sur l'emploi auquel elles avaient consacré le plus d'heures de travail.

Les données sur la profession sont groupées selon une classification à trois niveaux d'agrégation: 22 grands groupes qui se subdivisent en 80 sousgroupes et, par la suite, en 514 groupes de base. Les données de 1981 et de 1986 sur la profession sont directement comparables. Dans le cas des données du recensement de 1971, des ajustements préalables doivent être faits à l'univers et à la classification adoptés. Pour plus de renseignements à ce sujet, veuillez vous reporter à la définition de PROFESSION (selon la classification de 1971). Voir le Dictionnaire du recensement de 1986, nº 99-101F au catalogue.

#### **PROVINCE**

Principale division politique du Canada. Du point de vue statistique, c'est une unité de base pour laquelle toutes les données sont totalisées et recoupées. Dans les publications du recensement, les tableaux relatifs aux provinces comprennent le Yukon et les Territoires du Nord-Ouest.

# PROVINCE DE RÉSIDENCE CINQ ANS AUPARAVANT

Province dans laquelle se trouvait le lieu habituel de résidence du recensé le 1<sup>er</sup> juin 1981, soit cinq ans avant le jour du recensement.

# SCOLARITÉ: PLUS HAUT NIVEAU ATTEINT

Dernière année d'études terminée ou non au niveau primaire et secondaire, ou dernière année universitaire ou non universitaire terminée. Dans la hiérarchie de la scolarité, les études universitaires sont classées au-dessus de la catégorie "autres études non universitaires". En outre, la personne qui a obtenu un grade, certificat ou diplôme se trouve classée à un échelon audessus de celle qui a un nombre d'années de scolarité plus élevé, terminées ou non, mais qui n'a pas de titre scolaire.

### SCOLARITÉ: PRINCIPAL DOMAINE D'ÉTUDES (PDÉ)

Principale discipline ou principal domaine dans lequel le recensé a fait ses études ou reçu sa formation et obtenu son plus haut grade, certificat ou diplôme postsecondaire. En ce qui a trait au principal domaine d'études, la classification adoptée comporte 10 grandes catégories: enseignement, loisirs et orientation; beaux-arts et arts appliqués; lettres, sciences humaines et disciplines connexes; sciences sociales et disciplines connexes; commerce, gestion et administration des affaires;

93-108 93-108

sciences et techniques agricoles et biologiques; génie et sciences appliquées; techniques et métiers du génie et des sciences appliquées; professions, sciences et technologies de la santé; mathématiques et sciences physiques. Les catégories sont elles-mêmes subdivisées en plus de 100 "souscatégories", elles-mêmes divisées en plus de 425 groupes de "base".

#### SEXE

Qualité d'homme ou de femme.

# ÉCHANTILLONNAGE ET PONDÉRATION

Les données du recensement de 1986 ont été recueillies sur une base de 100% (c'est-à-dire auprès de tous les ménages) ou par un échantillonnage aléatoire des ménages; ces données sont pondérées afin de fournir des estimations sur l'ensemble de la population. Les renseignements figurant dans le présent bulletin ont été recueillis auprès d'un échantillon de 20% et pondérés afin de compenser l'effet de l'échantillonnage. Tous les titres des tableaux ont été annotés en conséquence. (Veuillez remarquer que, dans les réserves indiennes et les régions éloignées, toutes les données ont été recueillies auprès de toute la population. Dans les Territoires du Nord-Ouest, les données ont été recueillies auprès de toute la population mais, pour les collectivités de Fort Smith, Hay River, Pine Point et Yellowknife, seulement 20% des données ont été traitées.)

Quelle que soit la région géographique, le total ou total partiel pondéré de la population, des ménages, des logements ou des familles peut différer de celui qui figure dans les bulletins de données intégrales. Cet écart (outre l'effet de l'arrondissement aléatoire) sera attribuable à l'échantillonnage.

### QUALITÉ DES DONNÉES

#### **GÉNÉRALITÉS**

Le recensement de 1986 a été un projet complexe de grande envergure. Même si l'on a déployé des efforts considérables pour maintenir des normes élevées tout au cours des activités de collecte et de traitement, les estimations obtenues sont inévitablement entachées d'erreurs. Les utilisateurs doivent savoir que ces erreurs existent et avoir une idée générale des principales composantes du recensement afin d'être en mesure de déterminer si les données du recensement

peuvent leur être utiles et évaluer les risques que comporte le fait de baser leurs conclusions ou leurs décisions sur ces données.

Des erreurs peuvent se produire pratiquement à toutes les étapes du recensement, allant de la préparation des documents au traitement des données, en passant par l'établissement des listes des logements et la collecte des données. Certaines erreurs peuvent survenir plus ou moins au hasard et, lorsque les différentes réponses sont agrégées pour un groupe suffisamment grand, elles tendent à s'annuler. Dans le cas des erreurs de cette nature, plus le groupe est grand, plus l'estimation correspondante est exacte. C'est pour cette raison que les utilisateurs sont invités à employer avec une certaine réserve les petites estimations. Par contre, d'autres erreurs peuvent se produire systématiquement et entraîner des estimations "biaisées". Comme le biais découlant de ces erreurs est persistant, peu importe la taille du groupe pour lequel les réponses sont agrégées, et qu'il est particulièrement difficile à mesurer, les erreurs systématiques posent un plus grave problème à la plupart des utilisateurs des données que les erreurs aléatoires mentionnées plus haut.

En ce qui concerne les données du recensement en général, les principaux types d'erreur sont les suivants:

- les erreurs d'observation, qui se produisent lorsqu'on oublie des logements ou des personnes, qu'on les englobe à tort ou qu'on les compte deux fois;
- les erreurs dues à la non-réponse, qui découlent du fait qu'on n'a pas pu obtenir de réponses d'un petit nombre de ménages et(ou) de personnes à cause d'une absence prolongée ou pour toute autre raison;
- les erreurs de réponse, qui surviennent lorsque le répondant, et parfois le recenseur, a mal interprété une question du recensement et a inscrit une mauvaise réponse;
- les erreurs de traitement, qui peuvent se produire à diverses étapes, notamment: au codage, lorsque les commis transforment les réponses en toutes lettres en codes numériques; à la saisie des données, lorsque les préposés à l'introduction des données transfèrent sur les bandes pour ordinateur les réponses figurant sur le questionnaire du recensement; à l'imputation, lorsque l'ordinateur insère dans un enregistrement une réponse "valide", mais pas nécessairement exacte, pour remplacer des données manquantes ou "invalides" (une

93-108 93-108

réponse est "valide" si elle est conforme aux autres renseignements de l'enregistrement, elle est "invalide" si elle n'est pas conforme);

- les erreurs d'échantillonnage, qui s'appliquent uniquement aux questions supplémentaires figurant sur la formule complète et s'adressant à un échantillon d'un cinquième des ménages; elles résultent du fait que les réponses à ces questions, lorsqu'elles sont pondérées pour représenter l'ensemble de la population, diffèrent inévitablement des résultats qu'on aurait obtenus si on avait posé ces questions à tous les ménages.

Les types d'erreur ci-dessus ont chacun une composante aléatoire et une composante systématique. Toutefois, la composante systématique des erreurs d'échantillonnage est généralement très faible par rapport à la composante aléatoire. Par contre, dans le cas des erreurs non dues à l'échantillonnage, les deux composantes peuvent être importantes.

#### ERREURS D'OBSERVATION

Les erreurs d'observation peuvent influer sur la précision des chiffres du recensement, c'est-à-dire la taille des divers univers du recensement: la population, les familles, les ménages et les logements. Bien qu'on ait pris quelques mesures pour corriger les erreurs identifiables, une certaine marge d'erreur subsiste toujours dans les chiffres définitifs du fait que des logements ou des personnes ont été oubliés, pris en compte par erreur dans le recensement ou comptés deux fois.

Si des logements ou des personnes n'ont pas été pris en compte alors qu'ils auraient dû l'être, on a un sous-dénombrement. Des logements peuvent être oubliés à la suite d'une mauvaise interprétation des limites des secteurs de dénombrement (SD) ou du fait que des logements sont cachés ou semblent inhabitables. Des personnes peuvent être oubliées quand le logement est oublié ou classé comme inoccupé, ou quand certains membres des ménages sont omis sur le questionnaire parce que le répondant a mal interprété les instructions concernant les personnes à inclure. Certaines personnes peuvent être oubliées parce qu'elles n'ont aucun lieu habituel de résidence et qu'elles ne se trouvaient dans aucun logement la nuit du recensement.

Les logements ou les personnes qui ont été pris en compte par erreur ou qui ont été comptés deux fois donnent lieu à un surdénombrement. Le surdénombrement des logements peut se produire lorsque des constructions ne convenant pas à l'habitation sont comptées comme des logements ou lorsque des unités qui ne correspondent pas à la définition d'un logement utilisée dans le recensement sont énumérées séparément au lieu d'être considérées comme faisant partie d'un grand logement. Le double compte des logements peut se produire, par exemple dans les cas où les limites des SD ne sont pas clairement définies. Les personnes peuvent être comptées deux fois parce que leur logement est compté deux fois ou parce que les lignes directrices concernant les personnes à inscrire dans le questionnaire ont été mal interprétées. Parfois, une personne qui n'habite pas habituellement le Canada peut être comptée, à tort, dans le recensement. En moyenne, le surdénombrement est moins susceptible de se produire que le sous-dénombrement; les chiffres des logements et des personnes sont donc probablement légèrement sous-estimés.

En 1986, on a entrepris quatre études pour mesurer les différents aspects des erreurs d'observation. Premièrement, on a revisité un échantillon des logements dénombrés comme inoccupés afin de vérifier s'ils étaient vraiment inoccupés le jour du recensement. On a rectifié les chiffres définitifs du recensement pour tenir compte des ménages oubliés parce que leur logement a été classé par erreur comme inoccupé. Deuxièmement, on a prélevé un échantillon des personnes dénombrées comme résidents temporaires pour vérifier si elles ont été dénombrées à leur lieu habituel de résidence. Au moyen de cet échantillon, on a pu estimer le nombre de personnes qui ont été oubliées parce qu'elles étaient temporairement absentes de leur lieu habituel de résidence. On a apporté les corrections correspondantes aux chiffres de population définitifs. Malgré ces corrections, les chiffres définitifs sont encore sujets à un certain sous-dénombrement. Pour l'ensemble du Canada et pour chaque province, on mesure l'ampleur de ce sous-dénombrement résiduel dans le recensement de 1986 au moyen d'une étude spéciale: la Contrevérification des dossiers. Le sous-dénombrement est généralement plus élevé pour certains groupes de la population, tels que les jeunes hommes adultes et les récents immigrants. Le sousdénombrement est compensé dans une certaine

mesure par les erreurs de surdénombrement; en 1986, pour la première fois une étude spéciale est maintenant en cours, pour déterminer les erreurs de surdénombrement.

#### AUTRES ERREURS NON DUES À L'ÉCHANTILLONNAGE

Les erreurs d'observation font varier le nombre d'unités dans les divers univers du recensement, tandis que d'autres genres d'erreur font varier les caractéristiques de ces unités.

Il est parfois impossible d'obtenir d'un ménage une réponse complète, même si le logement a été jugé occupé et un questionnaire a été livré. Les membres du ménage ont pu s'absenter pendant toute la période du recensement ou, dans de rares cas, le chef de ménage a pu refuser de remplir le questionnaire. Il arrive plus souvent que le questionnaire est retourné, mais que les données fournies à certaines questions ou pour certaines personnes sont incomplètes. Nous déployons des efforts considérables pour obtenir la réponse la plus complète possible. Les recenseurs vérifient les questionnaires et effectuent des suivis s'il manque des données. Le travail des recenseurs est ensuite vérifié par un surveillant et un technicien du contrôle qualitatif. Malgré ces mesures, à la fin de la phase de collecte des données, il manque un petit nombre de réponses. Bien que les entrées manquantes soient éliminées pendant le traitement des données, il peut toujours se glisser quelques erreurs dues à la non-réponse. Ce genre d'erreur est particulièrement grave si les nonrépondants sont différents des répondants à certains égards puisque, comme on le décrit dans un paragraphe ultérieur, la valeur manquante est remplacée par une valeur correspondante tirée d'un dossier "similaire". Si certaines caractéristiques des non-répondants diffèrent de celles des répondants, cette méthode entraîne un biais dû à la non-réponse. Salt Salt Care

Même lorsqu'on obtient une réponse, il se peut qu'elle ne soit pas tout à fait précise. Le répondant peut avoir mal interprété la question ou avoir donné une réponse incertaine, surtout s'il à répondu pour un autre membre du ménage qui était peut-être absent. Ces erreurs sont appelées erreurs de réponse. Bien que les erreurs de réponse soient en général attribuables à des renseignements imprécis fournis par les répondants, elles peuvent parfois être liées à des erreurs qu'a faites le recenseur au moment où il a rempli certaines sections du questionnaire, comme le type de construction résidentielle, ou lorsqu'il a rappelé le répondant pour obtenir des données manquantes.

À certaines questions du recensement, il faut inscrire une réponse en toutes lettres. Pendant le dépouillement au bureau régional, on attribue un code numérique à ces réponses "écrites". Il peut alors se produire des erreurs de codage, surtout lorsque la liste des codes est longue (comme dans le cas de la langue, de l'origine ethnique, de l'industrie et de la profession) ou lorsque la réponse écrite est ambiguë, incomplète ou difficile à lire. En vérifiant un échantillon du travail de chaque préposé au codage et en prenant des mesures correctives s'il y a lieu, on peut contrôler les erreurs de codage, sans toutefois les éliminer complètement.

Après le codage et certaines autres étapes du dépouillement manuel des données, les renseignements figurant sur les questionnaires sont introduits sur clavier dans un fichier d'ordinateur. Deux procédures servent à contrôler le nombre d'erreurs à la saisie des données. Premièrement, certaines vérifications (comme le contrôle des tranches) sont effectuées au moment de l'introduction des données. Deuxièmement, un échantillon de chaque lot de documents est réintroduit et comparé à la série de données originale. Si le nombre d'erreurs dans la série originale est supérieur à un nombre déterminé, tout le lot doit être réintroduit.

Une fois que les données sont saisies, elles sont envoyées à Ottawa, où elles font l'objet d'une série de contrôles informatiques permettant de découvrir des réponses manquantes ou incohérentes. Dans le cas des réponses incohérentes, il faut d'abord décider quelle réponse doit être considérée non valide. Les réponses non valides ou manguantes doivent ensuite être remplacées par de bonnes réponses, c'est-à-dire par des réponses compatibles avec les autres données figurant sur l'enregistrement. Dans une faible proportion de cas, la bonne réponse peut être déduite à partir des autres données de l'enregistrement. Toutefois, dans la plupart des cas, cela est impossible, et la bonne réponse est tirée d'un enregistrement "donneur" choisi au hasard parmi un groupe d'enregistrements cohérents où un certain nombre de caractéristiques connexes sont similaires à celles de l'enregistrement incomplet. On ne peut bien sûr garantir que la valeur imputée sera nécessairement la bonne réponse pour la personne concernée. Néanmoins, si les enregistrements contenant des données non valides ou manquantes sont, en moyenne, similaires aux enregistrements valides, les erreurs à l'imputation sont plus ou moins éliminées lorsque les résultats sont totalisés pour une région géographique ou un sous-groupe de la population suffisamment important.

On mène actuellement diverses études pour évaluer la qualité des réponses obtenues dans le cadre du recensement de 1986. Pour chaque question, on a calculé des taux de réponse et des taux de rejet à la vérification. Ces taux peuvent servir à déterminer la présence possible d'erreurs dues à la non-réponse et d'autres erreurs. De plus. les totalisations du recensement de 1986 ont été. ou seront, comparées à des estimations correspondantes établies à partir de recensements antérieurs, d'enquêtes-échantillon (comme l'Enquête sur la population active) et de divers dossiers administratifs (comme les extraits de naissances et les rapports d'évaluation municipale). Ces comparaisons peuvent indiquer certains problèmes potentiels au niveau de la qualité ou du moins certaines incohérences entre les sources d'information.

En plus de ces comparaisons globales, on étudie actuellement les données de certains particuliers en comparant les réponses du recensement à une autre source de renseignements. Pour certaines caractéristiques "stables" (comme l'âge, le sexe, la langue maternelle, le lieu de naissance, etc.), les réponses obtenues au recensement de 1986 sont comparées aux renseignements fournis pour les mêmes personnes au recensement de 1981. De plus, après le recensement de 1986, on a dénombré une seconde fois un échantillon de répondants, surtout pour déterminer les taux de surdénombrement. En même temps, les interviewers ont posé une série de questions détaillées sur la langue, l'origine ethnique et le type de construction résidentielle, et les réponses seront comparées aux réponses fournies au recensement, ce qui nous permettra de déterminer les erreurs de réponse et, nous l'espérons, de les comprendre.

#### ERREURS D'ÉCHANTILLONNAGE

Les estimations qui sont obtenues par la pondération des réponses recueillies auprès d'un échantillon sont sujettes à une erreur vu que la répartition des caractéristiques au sein de l'échantillon n'est habituellement pas identique à la répartition des caractéristiques au sein de la population à partir de laquelle l'échantillon a été prélevé.

L'erreur possible introduite par l'échantillonnage variera en fonction de la rareté relative de la caractéristique au sein de la population. Lorsqu'il y a des cases comportant des chiffres assez grands, l'erreur possible attribuable à l'échantillonnage, en proportion de la valeur de la case, sera relativement petite. Si les valeurs des cases sont petites, cette erreur, en proportion de la valeur de la case, sera toutefois relativement importante.

L'erreur possible due à l'échantillonnage est généralement exprimée en termes d'erreur type. Ceci est la racine carrée de la moyenne, tirée de tous les échantillons possibles de même taille et du même plan, de l'écart quadratique de l'estimation de l'échantillonnage à la valeur pour la population totale.

Le tableau ci-dessous présente une évaluation approximative de l'erreur type provenant de l'échantillonnage. Cette évaluation ne devrait servir que de guide.

Les utilisateurs qui désirent connaître l'erreur approximative provenant de l'échantillonnage pour une case de données en particulier, d'après l'échantillon de 20%, n'ont qu'à choisir la valeur de l'erreur type dans la colonne du tableau des erreurs types dont la rubrique est le plus près de la valeur de la case dans la totalisation du recensement. Lorsqu'il utilise la valeur obtenue de l'erreur type. l'utilisateur peut en général être raisonnablement certain que la valeur réelle de la population recensée (si l'on ne tient compte d'aucune forme d'erreur autre que l'échantillonnage) se situera à plus ou moins trois fois l'erreur type (par exemple, pour une case dont la valeur est 1,000, l'écart s'étendra de 1,000 + ou - 3X65 ou 1,000 + ou -195).

Les erreurs types données dans le tableau cidessous ne s'appliqueront pas aux totaux ou totaux partiels de la population ou de l'univers (per-

Tableau: Erreur type approximative provenant de l'échantillonnage des données-échantillon du recensement de 1986

| Valeur des cases           |    |     |     |     |       |       |       |        |        |        |         |         |
|----------------------------|----|-----|-----|-----|-------|-------|-------|--------|--------|--------|---------|---------|

sonnes, ménages, logements ou familles) de la région géographique à l'étude (voir Échantillonnage et pondération). On peut connaître l'effet de l'échantillonnage sur ces cases en consultant la publication correspondante qui présente les données intégrales.

Les répercussions du plan d'échantillonnage et de la procédure de pondération utilisés au recensement de 1986 varieront cependant d'une caractéristique à une autre et d'une région géographique à l'autre. Les valeurs de l'erreur type dans le tableau à la page précédente pourront toutefois surestimer ou sous-estimer l'erreur provenant de l'échantillonnage.

Pour de plus amples renseignements sur la qualité des données du recensement, veuillez communiquer avec la Division des méthodes d'enquêtes sociales de Statistique Canada, Ottawa, Canada K1A 0T6 (613) 951-6929.

### CONFIDENTIALITÉ ET ARRONDISSEMENT ALÉATOIRE

Par souci de confidentialité, les chiffres publiés dans le présent rapport ont subi un "arrondissement aléatoire" qui supprime toute possibilité d'associer des chiffres à une personne facilement reconnaissable. Grâce à cette méthode, tous les chiffres, y compris les totaux, sont arrondis de façon aléatoire (vers le haut ou vers le bas) jusqu'à un multiple de "5". Cette technique assure une protection efficace contre la divulgation directe, par soustraction ou par méthode résiduelle, sans ajouter d'erreur significative aux données du recensement. Cependant, comme les totaux sont arrondis séparément, ils ne correspondent pas nécessairement à la somme des chiffres arrondis dans les répartitions. De plus, il faut s'attendre à ce que les totaux et les autres chiffres correspondants dans diverses totalisations du recensement présentent quelques légères différences. De même, la somme des pourcentages calculés à partir de chiffres arrondis ne correspond pas forcément à 100. Les répartitions en pourcentage et les taux sont dans la plupart des cas basés sur des données arrondies, alors que les variations en pourcentage et les movennes sont basées sur des données non arrondies.

La distorsion importante pouvant résulter de l'arrondissement aléatoire lorsqu'il s'agit de cases de faible valeur préoccupe certains utilisateurs. Cette distorsion, qui assure la protection contre la divulgation, entraîne une perte de précision des cases de données renfermant des chiffres peu

élevés. Cependant, comme il s'agit d'une méthode aléatoire, les erreurs dues à l'arrondissement ont tendance à disparaître lorsque les cases de données sont agrégées de nouveau. Il est aussi possible de réduire les distorsions en intégrant des totaux partiels dans les totalisations. On peut aussi choisir de demander des totalisations spéciales établies à partir des bases de microdonnées du recensement. Dans le cas de produits personnalisés, l'arrondissement aléatoire se fait après que les cases de données ont été agrégées, ce qui réduit la distorsion au minimum.

Outre l'arrondissement aléatoire, on a adopté d'autres techniques, telles que la suppression des régions et des cases, afin d'assurer encore mieux la confidentialité des réponses.

Dans le cadre de la suppression des régions, toutes les données caractéristiques se rapportant à la région géographique sont supprimées et remplacées par le symbole (XXX). La suppression des données se fait différemment selon qu'il s'agit d'une région normalisée, c.-à-d. regroupant des secteurs de dénombrement (une circonscription électorale fédérale, une division de recensement, une subdivision de recensement, un secteur de recensement, etc.) ou d'une région non normalisée pour laquelle l'utilisateur désire une totalisation spéciale. Les données sont supprimées si la population est inférieure à 40 personnes dans le cas des régions normalisées, et à 100 personnes lorsqu'il s'agit de régions non normalisées. Pour les tableaux renfermant des répartitions des revenus, on supprime aussi les données relatives aux régions dont la population est inférieure à 250 personnes. Toutefois, les données supprimées sont incluses dans les totaux, partiels ou non, à un niveau d'agrégation supérieur. Cette technique est appliquée à tous les produits renfermant des données infraprovinciales (c.-à-d. la série des Profils, les produits sommaires de base, les produits personnalisés et semi-personnalisés), qu'il s'agisse de données intégrales ou de données recueillies sur un échantillon de 20%.

Nota: Pour les données-échantillon, la suppression des régions est fondée sur la population hors institution plutôt que sur la population totale, étant donné qu'aucune donnée-échantillon n'a été recueillie pour la population des institutions.

Dans le cas de la **suppression des cases**, il faut préciser une valeur minimale acceptable. Toutes les cases dont la valeur est inférieure au seuil établi sont supprimées et remplacées par le symbole (XXX). Les données supprimées sont toutefois incluses dans les totaux, partiels ou non, à un niveau d'agrégation supérieur. Pour les données de 1986, on a mis en oeuvre deux méthodes différentes de suppression des cases. Dans le cas des publications de la série "Le Pays" et de la série "Dimensions" portant sur le revenu, la profession précise ou l'industrie précise, on supprime la répartition lorsqu'il s'agit de moins de 250 personnes ou unités. Dans le cas de totalisations personnalisées ou semi-personnalisées se rapportant à des variables recueillies à partir d'un échantillon, toutes les cases dont la valeur est de "5" (après arrondissement aléatoire) sont supprimées.

# **NOTES SPÉCIALES**

# CHIFFRES DE POPULATION BASÉS SUR LA RÉSIDENCE HABITUELLE

Les chiffres de population présentés ici pour les différentes régions géographiques indiquent le nombre de Canadiens qui y ont leur lieu habituel de résidence, sans égard au lieu où ils se trouvaient le jour du recensement. Sont également comptés les Canadiens séjournant dans un logement de la région en cause le jour du recensement et n'ayant pas de lieu habituel de résidence ailleurs au Canada. Dans la plupart des régions, il n'y a guère de différence entre le nombre de résidents habituels et le nombre de personnes séjournant dans la région le jour du recensement. Toutefois, dans certains endroits, comme les lieux de villégiature et les régions où sont situés des camps de chantier importants, la différence entre ces deux chiffres peut être importante.

### RÉSERVES INDIENNES ET ÉTABLISSE-MENTS INDIENS PARTIELLEMENT DÉNOMBRÉS

Lors du recensement de 1986, le dénombrement n'a pas été autorisé sur certaines réserves indiennes et établissements indiens ou a dû être interrompu parce qu'on ne pouvait le mener à terme.

Les données de 1986 ne sont donc pas disponibles pour les réserves indiennes et les établissements indiens partiellement dénombrés et ne sont pas comprises dans les totalisations. Les données sur les régions géographiques ayant une ou plusieurs de ces réserves ou établissements font donc l'objet d'un nota approprié. En raison des données manquantes, les utilisateurs doivent prendre note

que les comparaisons (par ex., des variations en pourcentage) entre 1981 et 1986 ne sont pas exactes pour les régions géographiques en cause. L'effet des données manquantes est très faible pour les régions géographiques de niveau plus élevé (Canada, provinces, régions métropolitaines de recensement et agglomérations de recensement) mais peut être plus important pour les petites régions où les réserves et établissements indiens en cause représentent une proportion plus grande de la population.

Bien qu'il soit impossible d'estimer la population de chaque réserve partiellement dénombrée, les estimations de la population totale manquante et du nombre total de logements privés occupés au niveau provincial ont été faites et sont présentées à l'annexe.

Pour de plus amples renseignements sur ce sujet, reportez-vous au Bulletin d'information à l'intention des utilisateurs, numéro 1, "Sommaire de la méthode utilisée pour l'estimation de la population et du nombre de logements privés occupés dans les réserves indiennes où le dénombrement a été incomplet".

Veuillez noter par contre qu'il a été impossible d'estimer les caractéristiques de la population manquante, même au niveau provincial.

#### MOBILITÉ ET MIGRATION INTER-PROVINCIALE

Un migrant est une personne qui, cinq ans auparavant, n'avait pas son domicile habituel dans la subdivision de recensement (SDR) où elle a été dénombrée. Veuillez noter que les secteurs géographiques des SDR sont déterminés selon les limites en vigueur le ler janvier 1986, date de référence géographique du recensement du Canada de 1986.

Au niveau de la SDR, il est recommandé que les utilisateurs fassent preuve de prudence lorsqu'ils utilisent des données du nombre de migrants, en particulier dans le cas des municipalités de banlieue à l'intérieur des grandes régions métropolitaines. Les chiffres du total des migrants, y compris les immigrants et les émigrants internes, peuvent être déformés en raison de la possibilité de mauvaises réponses dans des cas tels que ceux-ci: (i) des répondants dans les régions métropolitaines ont déclaré la ville principale plutôt que la municipalité où ils vivaient cinq ans plus tôt (Toronto, au lieu de

Scarborough, par exemple); (ii) les répondants ne déclarent pas un déménagement d'une autre SDR s'ils estiment qu'ils sont toujours dans la même ville principale (ils ont fait un déménagement de Toronto à Scarborough, mais ont indiqué qu'ils habitaient toujours la même municipalité); et (iii) les répondants ont déclaré des déménagements selon des limites désuètes.

Le concept de "migrant" est défini au niveau de la SDR. Dans le cas des régions géographiques inférieures à la SDR telles que les secteurs de dénombrement (SD) et les secteurs de recensement (SR), le lecteur est prié de noter que la distinction entre la population des migrants et des nonmigrants se rattache à la SDR correspondante du SD ou du SR. Ainsi, les migrants du SR sont les personnes qui ont déménagé d'une autre SDR, tandis que les non-migrants sont ceux qui ont déménagé à l'intérieur de la même SDR, c'est-à-dire qu'ils sont passés d'un SR à un autre ou ont déménagé à l'intérieur du même SR.

Les noms et les limites de certaines subdivisions de recensement peuvent subir des modifications minimes, mais parfois importantes, au cours de la période de cinq ans entre deux recensements, et les comparaisons des données pour une région infraprovinciale donnée entre deux recensements ne seront donc pas valides si ces changements éventuels ne sont pas pris en compte.

On peut trouver des renseignements sur les changements de limites entre recensements dans la Classification géographique type (nº 12-573 au catalogue).

Les limites des RMR et des AR et leurs SDR composantes vont souvent subir des modifications entre deux recensements, et la comparaison des données pour des régions déterminées à ce moment-là ne sera pas valide à moins que ces changements ne soient pris en compte. Une publication contient les comparaisons des régions métropolitaines de recensement et des agglomérations de recensement de 1986 et de leurs homologues de 1981. La publication Régions métropolitaines de recensement et agglomérations de recensement: Comparaison entre 1986 et 1981 (nº 99-105F ou E au catalogue) donne la liste des subdivisions de recensement qui composent la version 1986 de chaque RMR et AR et présente les limites correspondantes pour 1981.

#### **ACTIVITÉ**

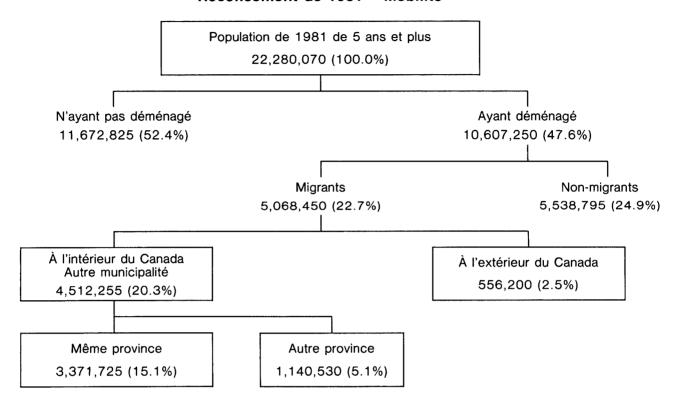

Les concepts de l'activité au recensement n'ont pas changé entre 1981 et 1986. Par contre, le traitement des données a été modifié, ce qui a entraîné quelques différences. Au recensement de 1986, contrairement aux recensements antérieurs, on n'a posé aucune question sur la fréquentation scolaire. Cette question était utilisée pour le contrôle de la variable de l'activité, plus spécifiquement le chômage. Par conséquent, ces différences de traitement affectent la population en chômage et sont en grande partie concentrées dans le groupe d'âge des 15 à 19 ans. Le tableau cidessous indique l'ampleur de cet effet sur les données, au niveau du Canada.

<sup>(1)</sup> Comprend tous les logements privés occupés par des résidents habituels ainsi que les logements privés occupés par des résidents étrangers et (ou) temporaires.

# **OÙ NOUS TROUVER?**

Les centres régionaux de consultation de Statistique Canada offrent la gamme complète des produits et services du recensement. On y trouve une bibliothèque et un comptoir de vente où les utilisateurs peuvent consulter ou acheter des publications du recensement, des disquettes de micro-ordinateurs, des microfiches, des cartes et plus encore. Chaque centre vous offre la possibilité d'extraire de l'information des systèmes de retrait de données automatisées CANSIM et TELICHART de Statistique Canada. Un service de renseignements téléphonique est également disponible; ce service est gratuit pour les clients se trouvant à l'extérieur des services d'appel locaux. On y offre également plusieurs autres services utiles, allant des séminaires aux consultations. Pour obtenir des renseignements, téléphonez ou écrivez au centre de consultation de votre région. Pour une description concise des produits et services du recensement de 1986, se reporter à la section "Lignes directrices pour l'utilisation de cette publication".

#### Note(s)

- Excludes 1986 Census data for one or more incompletely enumerated Indian reserves or Indian settlements. For estimates of the missed population and dwellings, see Special Notes.
- .. Figures not available.
- ... Figures not appropriate or not applicable.
- Nil or zero.

Occupation data for 1986 are based on the 1980 Standard Occupational Classification.

Industry data for 1986 are based on the 1980 Standard Industrial Classification.

For additional information concerning the data, see "Specia! Notes" section of text.

#### Footnote(s)

- (1)...The sample was 33 1/3% of households for the years 1971 and 1976, and 20% of households for other years shown.
- (2)...In 1961, 1971 and 1976, respondents who indicated that they had moved since the previous census, but for whom the previous province of residence could not be determined, had been included in a category named "Place of residence not stated". They are considered to be internal migrants.

In 1981 and 1985, a system of handling all mobility non-response and edit failures was implemented such that place of residence was imputed and there was no longer a requirement for the "Not stated" category.

- (3) ... Yukon and Northwest Territories are combined for 1961.
- (4)...Refers to the number of in-migrants into a province minus the number of out-migrants from the same province relative to the five-year interval.
- (5) ... Users should note that at the time of the 1951 Census, the 3,181 interprovincial migrants whose type of residence (urban or rural) in 1955 was not reported were excluded from origin-destination data, and therefore could not be included in this table. Also, the Yukon and Northwest Territories are shown combined.
- (6)...Does not include 279,325 internal migrants whose province or territory of residence in 1956 was not stated.
- (7)...Does not include 195,425 internal migrants whose province or territory of residence in 1971 was not stated.
- (8) ... Includes separated.
- (9)...Includes "Never attended school or attended kindergarten only".
- (10)...Refers to both postsecondary non-university courses requiring secondary school graduation and courses taken in other institutions such as trade schools or vocational centres which may not require secondary school graduation.
- (11)...Includes trades certificate, non-university certificate and university certificate or diploma below bachelor level.
- (12)...Includes "All other, n.e.c." and "No specialization".
- (13)...The term "Postsecondary" refers to all educational qualifications obtained other than secondary (high) school graduation certificate. This includes trades certificates, community college or CEGEP diplomas and all university qualifications.

#### Nota

- Ne comprend pas les données du recensement de 1986 pour une ou plusieurs réserves indiennes ou établissements indiens partiellement dénombrés. Pour une estimation de la population et des logements manquants, voir Notes spéciales.
- .. Nombres non disponibles.
- ... N'avant pas lieu de figurer.
- Néant ou zéro.

Les données des professions de 1986 sont basées d'après la Classification type des professions, 1980.

Les données des industries de 1986 sont basées d'après la Classification type des industries, 1980.

Pour obtenir plus de renseignements concernant les données, voir la section "Notes spéciales" du texte.

#### Renvoi(s)

- (1)...L'échantillon était de 33 1/3% des ménages pour les années 1971 et 1976, et de 20% des ménages pour les autres années indiquées.
- (2)...En 1961, 1971 et 1976, les répondants qui avaient déclaré avoir déménagé depuis le dernier recensement mais dont on ne pouvait déterminer la dernière province de résidence ont été comptés dans la catégorie "Lieu de résidence non déclaré". Ces personnes sont considérées comme étant des migrants internes.

En 1981 et 1986, un système a été mis en œuvre pour traiter les cas de non-réponses à la question sur la mobilité et les cas de rejets au contrôle. Le lieu de résidence a été imputé; la categorie "Non déclaré" n'est donc plus requise.

- (3)...Le Yukon et les Territoires du Nord-Ouest sont combinés pour 1961.
- (4)...Différence entre le nombre d'immigrants internes arrivés dans une province et le nombre d'émigrants internes qui ont quitté la même province au cours de la période intercensitaire.
- (5)...On doit noter que lors du recensement de 1961, les 3,181 migrants interprovinciaux dont le type d'habitat (urbain ou rural) en 1955 n'a pas été indiqué ont été exclus des données sur les origines et destinations, donc, on n'a pas pu les inclure dans ce tableau. En plus, le Yukon et les Territoires du Nord-Ouest sont combinés.
- (6)...Ne comprend pas les 279,325 migrants internes dont la province ou le territoire de résidence en 1966 n'a pas été déclaré.
- (7)...Ne comprend pas les 195,425 migrants internes dont la province ou je territoire de résidence en 1971 n'a pas été déclaré.
- (8) ... Comprend les personnes séparées.
- (9) ... Comprend "Aucune scolarité ou uniquement l'école maternelle".
- (10)...Désigne les cours postsecondaires non universitaire qui exigent un certificat d'études secondaires ainsi que les cours suivis dans d'autres établissements tels que les écoles de métiers ou les centres de formation professionnelle qui n'exigent pas nécessairement de certificat d'études secondaires.
- (11)...Comprend un certificat d'une école de métiers, un certificat non universitaire et un certificat ou diplôme universitaire inférieur au bacca!auréat.
- (12)...Comprend "Autres disciplines, n.c.a." et "Sans spécialisation".
- (13)...Par "Postsecondaire", on entend tous les titres scolaires sauf le certificat d'études secondaires. Sont compris les certificats d'écoles de métiers, les diplômes d'un collège communautaire ou d'un cégep et tous les grades, certificats et diplômes universitaires.

- (14) ... Includes "Never worked".
- (15)...Occupation major group totals include computer assignment of the "Not stated". These assignments are based on selected socio-economic characteristics.
- (15)...Unemployed persons 15 years and over, who have never worked or who had worked only prior to January 1, 1985.
- (17)...This category is also referred to as the "Experienced labour force"
- (18)...Industry division totals include computer assignment of the "Not stated". These assignments are based on selected socio-economic characteristics.

#### Abbreviation(s)

n.e.c.= not elsewhere classified.

- (14) ... Y compris "N'ayant jamais travaillé".
- (15)...les totaux des grands groupes de professions comprennent les assignations par ordinateur des catégories "Non déclarées". Ces assignations sont basées sur certaines caractéristiques socio-économiques.
- (15)...Personnes en chômage de 15 ans et plus qui n'ont jamais travaillé ou qui ont travaillé seulement avant le ler janvier 1985.
- (17)...On nomme aussi cette catégorie "Population active expérimentée".
- (18)...Les totaux des divisions d'industries comprennent les assignations par ordinateur des catégories "Non déclarées". Ces assignations sont basées sur certaines caractéristiques socio-économiques.

#### Abréviation(s)

n.c.a.= non classés ailleurs.

# Decisions Décisions

ECISION DATA: The 1986 Census Data Base provides the definitive picture of Canada today and a Focus for the Future. Census products offer researchers, policy analysts and other decision makers maximum flexibility using a core data base together with a range of customized products: vital keys to quality research and good planning.

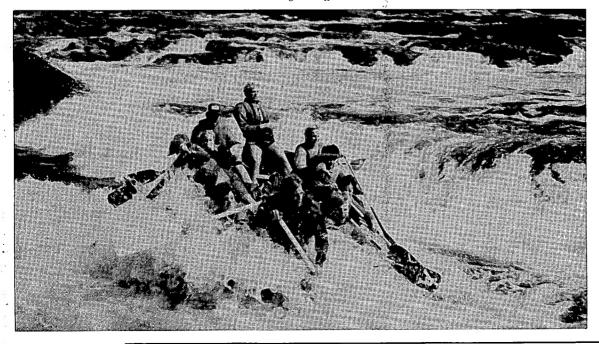

A corporation is scouting Canada for places to sell summer and winter sporting goods. Seeking target markets that conform to its client profiles, this company will need to look at incomes, occupation, age groups and even family structure to find the best locations. The Census Customized Service designed a package to meet the criteria.

A community association was asked to advise the municipal parks committee on the recreation plan for their area. Using census data on family formation, size and standard of living, the association concluded that a children's play area would be under used by the mostly older, working population. They proposed revenue-generating sports facilities be built instead.

Find out more about the 1986 Census Data Service from your nearest Statistics Canada Regional Office. ONNÉES DÉCISIVES: La base de données du recensement de 1986 permet de brosser un portrait définitif du Canada d'aujourd'hui et de faire voile vers l'avenir. Les produits du recensement offrent aux recherchistes, aux analystes des politiques et à d'autres décideurs un maximum de souplesse, et ce grâce à la base de données et à un éventail de produits personnalisés, secrets d'une recherche de qualité et d'une bonne planification.

Une compagnie parcourt le Canada à la recherche de points de vente d'équipement sportif d'été et d'hiver. Pour déterminer les marchés cibles répondant au profil de sa clientèle, bref, les meilleurs emplacements, cette compagnie devra passer en revue les données sur le revenu, la profession, less groupes d'âges et même la composition des familles. Le Service personnalisé du recensement répond précisément à ces besoins.

Une association communautaire devait conseiller le comité municipal des parcs sur le plan de récréation de leur région. En utilisant les données du recensement sur la formation et la taille des familles ainsi que sur le niveau de vie, l'association devait conclure qu'une aire de jeux pour les enfants serait sous-utilisée par la plupart des travailleurs et personnes plus âgées. L'association a donc proposé à la place la création d'installations sportives à but lucratif.

Pour de plus amples renseignements au sujet du Service de données du recensement, veuillez communiquer avec le bureau régional de Statistique Canada le plus près de chez vous.
